

Strategy Overview

The Strategy seeks to maximize tax-free income and preserve capital using short duration, high credit quality municipal bonds. Portfolios are invested in callable municipals with higher than typical yields due to the market's inefficiency of assessing the likelihood of a bond being called prior to maturity. The Portfolio Management team, with focused knowledge and experience, is able to capitalize on this unique opportunity in the municipal market. This approach gives the Enhanced Income Municipal Strategy the potential to provide higher tax-free income without sacrificing credit quality or increasing market risk (duration).

Portfolio Construction

- Approximately 12 bonds per portfolio
- AA-A target average rating
- BBB minimum rating
- Target duration 0.1-0.3 years

DISCLOSURES

Effective June 30, 2020, F/m, Investments, LLC d/b/a Genoa Asset Management, LLC ("Genoa") acquired the assets of the F/m Genoa Enhanced Income Municipal Strategy (the "Composite" or "Strategy") from Ross Sinclair & Associates ("RSA"). Genoa utilizes past performance from RSA to link current performance and present historical returns in order to meet the requirements under the Global Investment Performance Standards (GIPS®). The investment management team and the investment decision process for the Composite remained intact throughout the period including the purchase by Genoa, and Genoa retains the records that support the reported performance. Genoa claims compliance with the Global Investment Performance Standards (GIPS®). Please see the Composite's GIPS Compliant presentation for important additional information. The verification reports are available upon request. GIPS® is a registered trademark of the CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Genoa is an investment adviser registered under the Investment Advisers Act of 1940. Registration as an Investment Adviser is no indication of any level of skill or training. The information presented herein is general in nature and is not designed to address your investment objectives, financial situation or particular needs. Prior to making any investment decision, you should assess or seek advice from a professional regarding whether any particular transaction is relevant or appropriate to your individual circumstances. Although taken from reliable sources, Genoa cannot guarantee the accuracy of information received from third parties. The information is current as of the date of this presentation and is subject to change at any time, based on market or other conditions. The F/m Genoa Enhanced Income Municipal Composite consists of fully discretionary, investment grade municipal bond portfolios. Performance is time-weighted for each performance period and reflects the reinvestment of dividends, income and capital appreciation. Gross performance is net of all trading and operational expenses, including brokerage, administrative, interest, and custodial costs. Pro forma net performance illustrated herein assumes a 0.40% annual management fee, with fees deducted from historical gross returns on a pro rata monthly basis. Investment Advisory fees are described in the Genoa Asset Management ADV Part 2A. Actual results of individual accounts and products utilizing the Strategy, as well as account holdings, may vary due to client cash flows, timing of implementation, different custodians, the availability of underlying securities, regulation, and other factors. Small accounts may underperform other accounts utilizing the Strategy due to the potentially greater impact of transaction costs. Historical performance was affected by material market and economic conditions that were independent of and not controlled by Genoa and may be different in the future.

All securities investing involves the risk of loss. Past performance is no guarantee of future results. There can be no assurance that the Strategy can meet its stated objectives.

The holdings in each account utilizing the Strategy may differ significantly from the securities that comprise the index. For example, each account utilizing the Strategy has significantly fewer positions than found in the index. The index has not been selected to represent an appropriate benchmark with which to compare an investor's performance, but rather is disclosed to allow for comparison of the investor's performance to that of a certain well-known and widely recognized index. You cannot invest directly in an index. The Top 10 holdings shown are based off the largest ten positions (as a percentage of portfolio assets) as of the date indicated and do not correspond to any performance metric. This list is provided for informational purposes and does not constitute advice to purchase or hold securities shown. Number of holdings excludes cash and fund positions, and only one share class is counted per issuer; average weight also non-stock positions and considers the combined weight of class shares, where applicable. Position sizes and dates of security purchase may differ between accounts managed according to this strategy. The Holdings identified do not represent all of the securities purchased, sold, or recommended for advisory clients and reflect the ten largest positions strictly as of the date indicated.

Investing in the Strategy entails the significant risks of fixed income investing, including market, interest rate, credit, issuer, inflation, liquidity, call, tax, political, economic and income risk. As interest rates rise, bond prices fall. Credit risk refers to an issuer's ability to make interest and principal payments when due. The Strategy utilizes a limited number of securities which reduces diversification and may magnify any potential losses. Income from municipal bonds is generally exempt from federal income tax and may be subject to state and local taxes and at times the alternative minimum tax; a strategy concentrating in a single or limited number of states is subject to greater risk of adverse economic conditions and regulatory changes.

DISCLOSURES

Morningstar Rating. The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The Strategy was rated against the number of separately managed account strategies and for the period(s) referenced on the front page. © 2025 Morningstar, Inc. All Rights Reserved. Index, Category and Universe. The *Bloomberg 1 Year Municipal Bond Index* is an unmanaged index of municipal bonds with a remaining maturity of one to two years. Index returns reflect the reinvestment of dividends and income, but do not reflect any applicable fees, expenses, or taxes. The index is provided for informational purposes only, is not reflective of any investment, nor is it professionally managed. It is not possible to invest directly in an index. • The *Morningstar Muni National Short* category contain a universe of portfolios that invest in bonds issued by state and local governments to fund public projects. The income from these bonds is generally free from federal taxes and/or from state taxes in the issuing state. To lower risk, some of these portfolios spread their assets across many sectors. These portfolios have durations of less than four years (or average maturities of less than five years). • The *eVestment SMA/Wrap - US Municipal Fixed Income Universe* consists of approximately 70 US Fixed Income products that primarily invest in Municipal bonds and are offered through an account used by a brokerage firm to manage an investor's portfolio. An annual fee structure bundles (or wraps) all the administrative, commission, and management expenses for the account.

Glossary: Risk/Return Statistics. *Alpha* is a measure of the difference between a portfolio's actual returns and its expected performance, give its level of risk as measured by beta. • *Beta* is a measure of a portfolio's sensitivity to market movements. • *Correlation* is a statistical measure of how two securities move in relation to each other, based on historical data. • *Down Capture* measures the percentage of market losses endured by a portfolio when markets are down. • *Information Ratio* is a measurement of portfolio returns relative to a benchmark compared to the volatility of those returns. • *Maximum Drawdown* is the maximum loss from a peak to a trough of a portfolio, before a new peak is attained. • *Up Capture* measures the percentage of market gains captured by a manager when markets are up. • *R-Squared* is a statistical measure of the percentage of a fund's or security's movements that can be explained by movements in a benchmark index. R-Squared values range from 0 to 1. A high R-Squared reflects performance patterns associated with an index. A low R-Squared reflects performance patterns different from an index. • *Sharpe Ratio* compares the excess return of an investment to its volatility or standard deviation. • *Sortino Ratio* compares the excess return of an investment to its downside deviation. • *Standard Deviation*, a measure of volatility and risk, is a statistical measure of the dispersion of returns for a given security or market index.

Glossary: Portfolio Characteristics. *Annual Turnover* is the percentage rate at which a portfolio replaces its investment holdings on an annual basis. • *Quality* for a bond reflects the financial strength of the issuer and its ability to pay interest and principal in a timely fashion. Bond rating agencies, including Standard and Poor's, Moody's, and Fitch, rate investment grade bonds between “AAA” or “Aaa” (highest) and “BBB” or “Baa” (lowest investment grade), and non-investment grade bonds between “BB” or “Ba” to “C” or “D” for default. • *Duration* measures the sensitivity of the price of a bond to changes in interest rates. As a general rule, for every 1% change in interest rates, up or down, a bond's price will change approximately 1% in the opposite direction, for every year of duration. • *Maturity* is the date on which a bond will mature and the bond issuer will pay the bondholder the face value of the bond. • *Average Maturity* is the weighted average of the maturities of bonds in a portfolio. • *Effective Duration* measures the sensitivity of the price of a bond with embedded options to changes in interest rates, accounting for the likelihood of a bond being called, put and/or sunk prior to its final maturity. • *Weighted Average Coupon* is the weighted average of the coupons or annual interest rates of the bonds in a portfolio. • *Yield to Maturity* is the total annual return anticipated on a bond if the bond is held until maturity. • *Yield to Worst* is a measure of the lowest possible yield on a bond with provisions that allow the issuer to retire a bond before it matures, based on the earliest allowable retirement date, excluding default.
