

Intermediate Fixed Income Commentary

PERFORMANCE SUMMARY

For the third quarter, the Intermediate Core strategy had a return before fees of 1.53% (1.43% net of fees), compared to the Bloomberg Intermediate Government/Credit Index return of 1.51%.

The Strategy maintained duration a neutral position versus benchmark. Performance from duration was flat during quarter. Curve positioning detracted slightly as the yield curve steepened with the 2-year rate dropping 11bps, while the 5-year and 7-year fell 6bps. The Strategy is overweight the 5-year and 7-year part of the curve. The 2s5s and 2s7s yield curve steepened slightly by 4bps hurting the strategy.

The Strategy is neutral to corporate credit with a slight overweight to higher beta sectors. The Corporate Index spread level moved in a tight 10bp range with the majority of August and September moving in just a 5bp range. The sector allocation performance detracted slightly from performance, while security selection added slightly to performance as more cyclical and lower rated issuers outperformed. The Strategy is underweight, the non-corporate credit sectors, however performance was flat for the quarter.

The overweight to ABS and non-agency CMBS added slightly to performance as spreads moved tighter with other spread product.

MARKET OUTLOOK

The Fed faces a dilemma. Core inflation — particularly in services remains stubbornly above target. Yet the labor market, following considerable revisions to job growth over the past year, has clearly cooled. The real economy is equally split. GDP growth surprised to the upside in the second quarter and appeared to be equally as strong during the third quarter. With inflation likely to remain above its 2% target for the foreseeable future, we do not see great urgency for numerous rate cuts. Rather, a couple more insurance cuts would be prudent. The strategy remains duration neutral versus the benchmark with an overweight to the belly of the yield curve while underweight longer maturities. The long end still seems vulnerable to bear steepening as uncertainty around inflation remains unresolved. The strategy is neutral versus the Corporate Index. The spread of the Corporate Bond Index is currently +74, 2bps wider than the YTD tight of +72. While we find the current spread levels relatively unattractive, we see little reason for spreads to widen significantly in the near term. Larger, high-grade companies should continue to benefit from strong technicals, stable fundamentals, and resilient growth. The strategy remains overweight the ABS sector. However, the exposure is to high quality senior bonds from proven issuers. As easing monetary policy environment amidst steady economic growth should keep ABS spreads range bound at the tightest levels of the cycle. A lower policy rate should benefit the sector, all else equal, but low duration ABS may be used as a funding vehicle. The strategy remains overweight CMBS with exposure to high-quality AAA tranches. Although a lower policy rate should broadly benefit the sector fundamentally, we still expect the bifurcation between newer vintage and legacy seasoned loans. Cap rates remain sticky at higher levels, leaving us preferential to recent vintages and SASB.

Composite and Benchmark Description: The Intermediate Fixed Composite includes accounts comprised of intermediate term fixed income securities with maturities or average lives generally not exceeding ten years and a duration similar to the benchmark. Prior to 10/01/2011 the composite was named Intermediate Core. The benchmark is the Bloomberg Intermediate Government/Credit Index. The Bloomberg Intermediate US Government/Credit Bond Index is a broad-based flagship benchmark that measures the non-securitized component of the US Aggregate Index with less than 10 years to maturity. The index includes investment grade, US dollar-denominated, fixed-rate treasuries, government-related and corporate securities. The CIO of Fixed Income left the firm in October 2021, the investment process remained unchanged.

Minimum Account Size: The minimum account size for this composite is \$1 million.

Composite Creation and Inception Date: The Intermediate Fixed composite creation and inception date is January 1, 2000.

Significant Cash Flow Policy: Beginning January 1, 2013, portfolios with significant cash flows are excluded from the composite. Cash flows of 10% or more are considered significant.

Internal Dispersion: The internal dispersion is measured by the asset-weighted standard deviation across asset-weighted portfolio returns represented within the composite for the period. If there are less than 6 portfolios in the composite for the entire year, the internal dispersion is not statistically meaningful and is presented as N.A. All risk measures are calculated using gross-of-fees returns.

Fees: Gross-of-fees returns are presented after trading expenses and before management fees. Net-of-fees returns are presented after the highest applicable management fee applied on a monthly basis. Prior to 1/1/12, fees were applied on a quarterly basis. The highest applicable management fee is 0.40%. Fees are calculated separately for each portfolio, and therefore, performance may differ from one portfolio to another. The effect of fees and expenses on performance will vary with the relative size of the fee and account performance. For example, if \$10 million were invested and experienced a 10% compounded annual return for ten years, its ending dollar value, without giving effect to the deduction of the advisory fee, would be \$25,937,425. If an advisory fee of 0.35% of average net assets per year for the ten-year period were deducted, the annual total return would be 9.63% and the ending dollar value would be \$25,083,791. The fee schedule is: 0.35% on the first \$50 million; 0.25% on the next \$50 million; 0.20% on all additional assets.

Other: Strategy assets include all portfolios in the Intermediate Fixed Income strategy, even those portfolios that are excluded from the composites because of significant cash flows or for other reasons, and include non-wrap, wrap and UMA assets. This is presented as supplemental information.

Disclosures

This review is for institutional advisory clients of F/m. The strategy review often expresses opinions about the direction of market, investment sector and other trends. The opinions should not be considered predictions of future results. The information contained in this report is based on sources believed to be reliable, but is not guaranteed and not necessarily complete.

Information contained herein is for informational purposes only and is not a recommendation to buy or sell any security. Contribution to portfolio return is calculated by multiplying the total return for the security by its average weight in the portfolio. There is no assurance that any securities discussed herein will remain in an account's portfolio at the time you receive this report or that securities sold have not been repurchased. The securities discussed do not represent an account's entire portfolio and in the aggregate may represent only a small percentage of an account's portfolio holdings. A complete list of all holdings is available upon request. It should not be assumed that recommendations made in the future will be profitable or will equal the performance of the securities represented herein. Other factors may impact overall performance for different accounts including the execution and timing of trades and any wrap sponsor's policies.

All investments involve risk, including the possible loss of principal, and there is no guarantee that investment objectives will be met. Bonds are subject to market, interest rate and credit risk; and are subject to availability and market conditions. Generally, the higher the interest rate the greater the risk. Bond values will decline as interest rates rise. Government bonds are subject to federal taxes. Municipal bond interest may be subject to the alternative minimum tax; other state and local taxes may apply. High yield bonds, also known as "junk bonds" are subject to additional risk such as increased risk of default. Some asset-backed securities may have structures that make their reaction to interest rates and other factors difficult to predict, making their prices volatile and they are subject to liquidity and valuation risk. Investments in bonds issued by non-U.S. companies are subject to risks including country/regional risk, which is the chance that political upheaval, financial troubles, or natural disasters will adversely affect the value of securities issued by companies in foreign countries or regions; and currency risk, which is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates.

The Bloomberg Intermediate US Government/Credit Bond Index is a broad-based flagship benchmark that measures the non-securitized component of the US Aggregate Index with less than 10 years to maturity. The index includes investment grade, US dollar-denominated, fixed-rate treasuries, government-related and corporate securities.
