No securities dealer, sales representative, or any other person has been authorized to give any information or to make any representations, other than those contained in this Prospectus or in approved sales literature in connection with the offer contained herein, and if given or made, such other information or representations must not be relied upon as having been authorized by the F/m Ultrashort Treasury Inflation-Protected (TIPS) ETF, F/m Yield Curve Steepening Strategy ETF, F/m Yield Curve Flattening Strategy ETF, F/m Rising Interest Rates Strategy ETF, or F/m Falling Interest Rates Strategy ETF (each a “Fund” and together the “Funds”) or The RBB Fund, Inc. This Prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the securities offered hereby in any jurisdiction or to any person to whom it is unlawful to make such offer.

SUMMARY SECTION – F/m Ultrashort Treasury Inflation-Protected Security (TIPS) ETF (RBIL)

Investment Objective

The investment objective of the F/m Ultrashort Treasury Inflation-Protected Security (TIPS) ETF (the “F/m Ultrashort TIPS Fund” or the “Fund”) is to seek investment results that correspond (before fees and expenses) generally to the price and yield performance of the Bloomberg U.S. Ultrashort TIPS 1-13 Months Total Return Unhedged USD Index (I39232US).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the F/m Ultrashort TIPS Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees ⁽¹⁾	0.17%
Distribution (12b-1) Fees	None
Other Expenses ⁽²⁾	None
Total Annual Fund Operating Expenses	0.17%

⁽¹⁾ Prior to September 15, 2025, the unitary management fee was 0.25%.

⁽²⁾ “Other Expenses” have been estimated to reflect expenses to be incurred during the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that: (1) your investment has a 5% return each year, and (2) the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$17	\$55	\$96	\$217

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. Portfolio turnover rates may vary from year-to-year, as well as within a year. During the period from February 24, 2025 (the date on which the Fund commenced investment operations) through August 31, 2025, the portfolio turnover rate of the Fund was 66% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a passively-managed exchange-traded fund (“ETF”) that seeks investment results, before fees and expenses, that correspond generally to the price and yield performance of the Bloomberg U.S. Ultrashort TIPS 1-13 Months Total Return Unhedged USD Index (I39232US) (the “Underlying Index”), which measures the performance of U.S. Treasury Inflation-Protected Securities (“TIPS”) with maturities from 1 month up to (but not including) 13 months. TIPS are income-generating instruments whose interest and principal payments are adjusted for inflation. The inflation adjustment, which is typically applied monthly to the principal of the bond, follows a designated inflation index, the non-seasonally adjusted Consumer Price Index for All Urban Consumers (“CPI-U”), and TIPS’ principal payments are adjusted according to changes in the CPI-U. A fixed coupon rate is applied to the inflation-adjusted principal so that, as inflation rises, both the principal value and the interest payments increase. This can provide a hedge against inflation, as it helps preserve the purchasing power of an investment. Because of this inflation adjustment feature, inflation-protected bonds typically have lower yields than conventional fixed-rate bonds. Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in TIPS with maturities of 1-13 months. bonds typically have lower yields than conventional fixed-rate

bonds. Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in TIPS with maturities of 1-13 months.

The Adviser uses a representative sampling indexing strategy in seeking to achieve the Fund’s investment objective. Under normal market conditions, the Fund invests substantially all of its assets in the securities comprising the Underlying Index and in securities that the Adviser determines to have economic characteristics that are substantially identical to the economic characteristics of the securities that comprise the Underlying Index, including, but not limited to, bonds that are capital-indexed and linked to a commonly used domestic inflation index.

In seeking to track the Underlying Index, the Fund may invest in securities that are not included in the Underlying Index, cash and cash equivalents and/or money market instruments, such as repurchase agreements and money market funds. The Fund is “non-diversified,” which means it may invest a greater percentage of its assets in the securities of a single issuer than a “diversified” fund.

The Underlying Index

The Underlying Index was incepted in January 2025, with history back to January 1, 2015, by Bloomberg Finance LP (the “Index Provider”). The Underlying Index is composed of equally weighted sub-components that have a remaining maturity from one (1) month up to (but not including) thirteen (13) months (e.g., 1-2 month maturities, 2-3 maturities, etc.). Federal Reserve holdings of TIPS are excluded from the face amount outstanding of each bond in the Underlying Index.

The Underlying Index has a minimum liquidity requirement of \$500M USD par amount outstanding (not adjusted for index duration). The bonds included in the Underlying Index are capital-indexed and linked to a commonly used domestic inflation index. Principal and interest are inflation-linked and denominated in U.S. dollars. The bonds are rated investment grade (Baa3/BBB-/BBB- or higher) using the middle rating of Moody’s® Investors Service, Inc. (“Moody’s”), Fitch Ratings, Inc. (“Fitch”) and Standard & Poor’s® Financial Services LLC (“S&P”); when a rating from only two agencies is available, the lower is used; when only one agency rates a bond, that rating is used. In cases where explicit bond level ratings are not available, the Index Provider may use other sources to classify securities by credit quality.

The Underlying Index is rebalanced by the Index Provider on the last business day of each month. The Underlying Index is calculated and administered by the Index Provider, which is not affiliated with the Fund or the Adviser. The Index Provider calculates the Underlying Index and Parent Index on a total return basis.

Additional information regarding the Underlying Index, including its value, is available at <https://assets.bbhub.io/professional/sites/27/Bloomberg-US-Ultrashort-TIPS-1-13-Months-Index.pdf>.

The Fund may invest in securities of other affiliated and unaffiliated ETFs registered under the Investment Company Act of 1940, as amended, that invest primarily in Fund eligible investments (collectively, “Underlying Funds”) to the extent permitted by applicable law and subject to certain restrictions.

The Fund may also seek to increase its income by lending securities. These loans will be secured by collateral (consisting of cash, U.S. government securities, or irrevocable letters of credit) maintained in an amount equal to at least 100% of the market value, determined daily, of the loaned securities. Cash collateral received by the Fund in connection with its lending of portfolio securities will be invested in short-term investments, including money market funds.

The Fund has elected to qualify each year for treatment as a regulated investment company (“RIC”) under Subchapter M of Subtitle A, Chapter 1, of the Internal Revenue Code of 1986, as amended (the “Code”).

Principal Investment Risks

As with any investment, you could lose all or part of your investment in the Fund and the Fund’s performance could trail that of other investments. The Fund is subject to certain risks, including the principal risks noted below, any of which may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and ability to meet its investment objective. The value of the Fund’s investments may decrease, which would cause the value of the Fund’s Shares to decrease. As a result, you may lose money on your investment in the Fund, and there can be no assurance that the Fund will achieve its investment objective. The Fund’s principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Affiliated Fund Risk.** Affiliated fund risk is the risk that the Adviser may select investments for the Fund based on its own financial interests or other business considerations rather than the Fund’s interests. The Adviser may be subject to potential conflicts of interest in selecting the Underlying Funds because the Underlying Funds pay an advisory fee to the Adviser based on their assets, the fees paid to the Adviser by some affiliated Underlying Funds may be higher than other Underlying Funds or the Underlying Funds may be in need of assets to enhance their appeal to other investors, liquidity and trading and/or to enable them to carry out their investment strategies. However, the Adviser is a fiduciary to the Fund and is legally obligated to act in the Fund’s best interest when selecting Underlying Funds.
- **Asset Class Risk.** Securities and other assets in the Fund’s portfolio may underperform in comparison to the general financial markets, a particular financial market, or other asset classes.
- **Concentration Risk.** The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund’s investments more than the market as a whole, to the extent that the Fund’s investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Cyber Security Risk.** Cyber security risk is the risk of an unauthorized breach and access to the Fund’s assets, Fund or customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the Adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality or prevent the Fund’s investors from purchasing, redeeming or exchanging shares or receiving distributions. While the Fund and Adviser have established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Further, the Fund cannot control the cybersecurity plans and systems of the Fund’s Index Provider and other service providers, market makers, or issuers of securities in which the Fund invests. The Fund and the Adviser have limited ability to prevent or mitigate cyber security incidents affecting third-party service providers, and such third-party service providers may have limited indemnification obligations to the Fund or the Adviser. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact and cause financial losses to the Fund or its shareholders. Issuers of securities in which the Fund invests are also subject to cyber security risks, and the value of these securities could decline if the issuers experience cyberattacks or other cyber-failures.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities will be more volatile and thus more likely to decline in price, and to a greater extent, in a rising interest rate environment than shorter-duration debt securities.
- **ETF Risk.** The Fund is an ETF, and, as a result of an ETF’s structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant (“AP”) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that are institutional investors and may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to the Fund Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of the Fund in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF’s Shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF Shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Secondary Market Trading Risk.* Although the Fund’s Shares are listed on a national securities exchange, The Nasdaq Stock Market, LLC (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. During periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

- **Shares May Trade at Prices Other Than NAV Risk.** As with all ETFs, Fund Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- **Fixed-Income Market Risk.** The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular issuer, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). An unexpected increase in Fund redemption requests, including requests from shareholders who may own a significant percentage of the Fund's Shares, which may be triggered by market turmoil or an increase in interest rates, could cause the Fund to sell its holdings at a loss or at undesirable prices and adversely affect the Fund's Share price and increase the Fund's liquidity risk, expenses and/or taxable distributions.
- **High Portfolio Turnover Risk.** The Fund may incur relatively high portfolio turnover. The active and frequent trading of the Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Income Risk.** The Fund's income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity, or are called, or the Fund otherwise needs to purchase additional bonds.
- **Index-Related Risk.** There is no guarantee that the Fund's investment results will have a high degree of correlation to those of the Underlying Index or that the Fund will achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. The Index Provider may rely on various sources of information to assess the criteria of components of the Underlying Index, including information that may be based on assumptions and estimates. Neither the Fund nor the Adviser can offer assurances that the Index Provider's methodology or sources of information will provide an accurate assessment of included components. Errors in index data, index computations or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders. Unusual market conditions or other unforeseen circumstances (such as natural disasters, political unrest or war) may impact the Index Provider or a third-party Provider and may cause the Index Provider to postpone a scheduled rebalance, which could cause the Underlying Index to vary from its normal or expected composition.
- **Inflation-Indexed Bonds Risk.** The principal value of an investment is not protected or otherwise guaranteed by virtue of the Fund's investments in inflation-indexed bonds. Inflation-indexed bonds are fixed-income securities whose principal value is periodically adjusted according to the rate of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal value. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Short-term increases in inflation may lead to a decline in value. Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity. Periodic adjustments for inflation to the principal amount of an inflation-indexed bond may give rise to original issue discount, which will be includable in the Fund's gross income. Due to original issue discount, the Fund may be required to make annual distributions to shareholders that exceed the cash received, which may cause the Fund to liquidate certain investments when it is not advantageous to do so. Also, if the principal value of an inflation-indexed bond is adjusted downward due to deflation, amounts previously distributed in the taxable year may be characterized in some circumstances as a return of capital.

- **Inflation-Linked Securities Risk.** In general, the value of an inflation-linked security, including TIPS, will typically decrease when real interest rates (nominal interest rates reduced by the expected impact of inflation) increase and increase when real interest rates decrease. When inflation is negative or concerns over inflation are low, the value and income of inflation-linked securities could fall and result in losses for the Fund and during periods of very low inflation, the yield on an inflation-linked security may be negative. Conversely, during sustained periods of high inflation, the Fund's yield should increase, which may not be repeated. Funds that invest heavily in inflation-linked securities do not always move in lockstep with inflation because they do not necessarily buy inflation-linked securities when they are originally issued or hold them until maturity. In addition, the accrual of inflation adjustments on the Fund's holdings may significantly impact the current level of dividends actually paid to shareholders. Changes in inflation rates and/or interest rates may cause the Fund's yield to vary substantially over time.
- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income the Fund receives from it but will generally affect the value of your investment in the Fund. Changes in interest rates may also affect the liquidity of the Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. The Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by the Fund and have a negative impact on the Fund's performance and NAV. Rising interest rates may prompt redemptions from the Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, the Fund may have a very low or even negative yield. A low or negative yield would cause the Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by the Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that the Fund will not be able to manage this risk effectively.
- **Management Risk.** As the Fund's portfolio will not typically replicate the Underlying Index fully, it is subject to the risk that the Adviser's investment strategy may not produce the intended results. The Adviser's use of a representative sampling indexing strategy to manage the Fund's portfolio may subject the Fund to an increased risk of tracking error, in that the securities selected in aggregate for the Fund's portfolio may not have an investment profile similar to those of the Underlying Index.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these and other factors including economic, political, financial, public health crises (such as epidemics or pandemics), war, acts of terrorism, recessions or other disruptive events (whether real, expected or perceived) in the local, regional or global markets. These factors could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund's NAV. As a result, an investor could lose money over short periods due to short-term market movements or long periods of time during prolonged market downturns.
- **Market Trading Risk.** Each Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund's creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund

being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

- **New Fund Risk.** The Fund is a newly organized management investment company with a limited operating history. In addition, there can be no assurance that the Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the "Board") of The RBB Fund, Inc. (the "Company") may determine to liquidate the Fund.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties, or other third parties, failed or inadequate processes or technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.
- **Passive Investment Risk.** Although the Fund is permitted to invest up to 100% of its assets in money market instruments for temporary defensive or liquidity purposes, the Adviser generally does not attempt to invest the Fund's assets in defensive positions.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund reinvests the proceeds from the disposition of its portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of the Shares.
- **Reverse Repurchase Agreements Risk.** The Fund may enter into reverse repurchase agreements in amounts not exceeding one-third of the Fund's total assets (including the amount borrowed).
- **Risk of Investing in the United States.** Certain changes in the United States economy, such as when the economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.
- **Securities Lending Risk.** The Fund may engage in securities lending (*i.e.*, lend portfolio securities to institutions, such as certain broker dealers). Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund. The Fund could also experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.
- **Tracking Error Risk.** The Fund may be subject to tracking error, which is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences, transaction costs incurred by the Fund, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of distributions, the requirements to maintain pass-through tax treatment, portfolio transactions carried out to minimize the distribution of capital gains to shareholders, acceptance of custom baskets, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of a Fund's U.S. Treasury obligations to decline.

Performance Information

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. Performance information will be included once the Fund has at least one calendar year of performance. Updated performance information will be available on the Fund's website at www.fminvest.com.

Management

Investment Adviser

F/m Investments LLC serves as the investment adviser.

Portfolio Managers

Team Member	Primary Titles	Start Date with the F/m Ultrashort TIPS Fund
Peter Baden	Managing Director, Director of Fixed Income Strategy	Inception
Alexander Morris	Chief Executive Officer	Inception
Marcin Zdunek	Managing Director, Head of Capital Markets & Portfolio Manager	Inception

Purchase and Sale of F/m Ultrashort TIPS Fund Shares

Shares are listed on a national securities exchange, the Exchange, and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Shares are listed on a national securities exchange, The Nasdaq Stock Market LLC (the “Exchange”), and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is provided at www.fminvest.com.

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is made through an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts. Certain states and localities may exempt distributions from tax when attributable to interest from U.S. federal government obligations. Please consult your personal tax advisor.

Financial Intermediary Compensation

If you purchase Fund Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Fund’s Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY SECTION – F/m Yield Curve Steepening Strategy ETF (USTP)

Investment Objective

The investment objective of the F/m Yield Curve Steepening Strategy ETF (the “F/m Yield Curve Steepening Fund” or the “Fund”) is to seek to implement a steepener yield curve strategy that is designed to benefit from the widening spread between short-term and long-term U.S. Treasury yields that typically occurs when shorter-maturity rates fall faster than longer-maturity rates, or when longer-maturity rates rise relative to shorter-maturity rates.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the F/m Yield Curve Steepening Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees	0.50%
Distribution (12b-1) Fees	None
Other Expenses	None
Total Annual Fund Operating Expenses	0.50%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that: (1) your investment has a 5% return each year, and (2) the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$51	\$160

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. Portfolio turnover rates may vary from year-to-year, as well as within a year. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. No portfolio turnover rate is provided for the Fund because the Fund had not commenced operations prior to the date of this Prospectus.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to implement a steepener yield curve strategy that is designed to benefit from the widening spread between short-term and long-term U.S. Treasury yields that typically occurs when shorter-maturity rates fall faster than longer-maturity rates, or when longer-maturity rates rise relative to shorter-maturity rates.

Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the shape of the yield curve. Specifically, the Fund may:

- Take short positions in longer-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields at the long end of the curve.
- Take long positions in shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to falling yields at the short end of the curve.

The Adviser actively manages the Fund’s positions based on market conditions, macroeconomic trends, and interest rate forecasts. The Fund’s portfolio is constructed and rebalanced periodically to maintain exposure aligned with the yield steepener objective, considering factors such as economic data, Federal Reserve policy, and global interest rate dynamics.

The Fund may also allocate a portion of its assets to cash, cash equivalents, or high-quality short-term instruments for liquidity and collateral purposes. The Fund does not seek to maintain a specific duration target, as its primary focus is on the relative movement between segments of the yield curve.

The Fund may enter into reverse repurchase agreements in amounts not exceeding one-third of the Fund's total assets (including the amount borrowed). The Fund may invest in securities of other affiliated and unaffiliated ETFs registered under the Investment Company Act of 1940, as amended, that invest primarily in Fund eligible investments (collectively, "Underlying Funds") to the extent permitted by applicable law and subject to certain restrictions.

The Fund may also seek to increase its income by lending securities. These loans will be secured by collateral (consisting of cash, U.S. government securities, or irrevocable letters of credit) maintained in an amount equal to at least 100% of the market value, determined daily, of the loaned securities. Cash collateral received by the Fund in connection with its lending of portfolio securities will be invested in short-term investments, including money market funds.

The Fund has elected to qualify each year for treatment as a regulated investment company ("RIC") under Subchapter M of Subtitle A, Chapter 1, of the Internal Revenue Code of 1986, as amended (the "Code").

Principal Investment Risks

The value of the Fund's investments may decrease, which will cause the value of the Fund's Shares to decrease. As a result, you may lose money on your investment in the Fund, and there can be no assurance that the Fund will achieve its investment objective. The Fund's principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Active Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.
- **Affiliated Fund Risk.** Affiliated fund risk is the risk that the Adviser may select investments for the Fund based on its own financial interests or other business considerations rather than the Fund's interests. The Adviser may be subject to potential conflicts of interest in selecting the Underlying Funds because the Underlying Funds pay an advisory fee to the Adviser based on their assets, the fees paid to the Adviser by some affiliated Underlying Funds may be higher than other Underlying Funds or the Underlying Funds may be in need of assets to enhance their appeal to other investors, liquidity and trading and/or to enable them to carry out their investment strategies. However, the Adviser is a fiduciary to the Fund and is legally obligated to act in the Fund's best interest when selecting Underlying Funds.
- **Asset Class Risk.** Securities and other assets in the Fund's portfolio may underperform in comparison to the general financial markets, a particular financial market, or other asset classes.
- **Cash or Cash Equivalents Risk.** At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.
- **Concentration Risk.** The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to a swap contract or other similar investment instrument may default on its payment obligation to the Fund. Such a default may cause the value of an investment in the Fund to decrease.
- **Cyber Security Risk.** Cyber security risk is the risk of an unauthorized breach and access to the Fund's assets, Fund or customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the Adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality or prevent the Fund's investors from purchasing, redeeming or exchanging shares or receiving distributions. While the Fund and the Adviser have established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Further, the Fund cannot control the cybersecurity plans and systems of the Fund's service

providers, market makers, or issuers of securities in which the Fund invests. The Fund and the Adviser have limited ability to prevent or mitigate cyber security incidents affecting third-party service providers, and such third-party service providers may have limited indemnification obligations to the Fund or the Adviser. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact and cause financial losses to the Fund or its shareholders. Issuers of securities in which the Fund invests are also subject to cyber security risks, and the value of these securities could decline if the issuers experience cyber-attacks or other cyber-failures.

- **Derivatives Risk.** A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities will be more volatile and thus more likely to decline in price, and to a greater extent, in a rising interest rate environment than shorter-duration debt securities.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **ETF Risk.** The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant (“AP”) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that are institutional investors and may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Note Fund Shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to the Fund Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of the Fund in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF's shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Secondary Market Trading Risk.* Although Shares are intended to be listed on a national securities exchange (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. During periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Shares trade on a stock exchange at prices at, above, or below the Fund's most recent NAV. The Fund's NAV is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Shares fluctuates continuously throughout trading hours on the exchange, based on both the relative market supply of, and demand for, the Shares and the underlying value of the Fund's portfolio holdings. As a result, the trading prices of the Shares may deviate from the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines. Any of these factors, among others, may lead to the Shares trading at a premium or discount to NAV.

- **Fixed-Income Market Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities or duration will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.
- **Futures Risk.** Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.
- **High Portfolio Turnover Risk.** The Fund may incur relatively high portfolio turnover. The active and frequent trading of the Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Illiquid Investments Risk.** The possible lack of a liquid secondary market for derivatives and the resulting inability of the Fund to sell or otherwise close a derivatives position could expose the Fund to losses and could make derivatives more difficult for the Fund to value accurately.
- **Income Risk.** The Fund's income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity or are called, or the Fund otherwise needs to purchase additional bonds.
- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income the Fund receives from it but will generally affect the value of your investment in the Fund. Changes in interest rates may also affect the liquidity of the Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. The Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by the Fund and have a negative impact on the Fund's performance and NAV. Rising interest rates may prompt redemptions from the Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, the Fund may have a very low or even negative yield. A low or negative yield would cause the Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by the Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that the Fund will not be able to manage this risk effectively.
- **Issuer Risk.** The performance of the Fund depends on the performance of individual securities or other assets to which the Fund has exposure. The value of securities or other assets may decline, or perform differently from the market as a whole, due to changes in the financial condition or credit rating of the issuer or counterparty.

- **Leverage Risk.** Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of other funds that do not use such techniques.
- **Liquidity Risk.** Certain securities held by the Fund may be difficult (or impossible) to sell at the time and at the price the Adviser would like. As a result, the Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that the Fund may lose money or be prevented from realizing capital gains if it cannot sell a security at a particular time and price.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors including economic, political, financial, public health crises (such as epidemics or pandemics), war, acts of terrorism, recessions or other disruptive events (whether real, expected or perceived) in the local, regional or and global markets. These factors could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund’s NAV. As a result, an investor could lose money over short periods due to short-term market movements or long periods of time during prolonged market downturns.
- **Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund’s creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s NAV.
- **New Fund Risk.** The Fund is a newly organized management investment company with no operating history. In addition, there can be no assurance that the Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the “Board”) of The RBB Fund, Inc. (the “Company”) may determine to liquidate the Fund.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.
- **Options Risk.** When the Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. The Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.
- **Over-the-Counter Market Risk.** Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.
- **Pricing Risk.** If market conditions make it difficult to value some investments, the Fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment’s sale. As a result, you could pay more than the market value when buying Fund Shares or receive less than the market value when selling Fund Shares.
- **Rate-Linked Derivatives Risk.** The Fund’s exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile. The value of such

investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. The Fund is expected to benefit from the options it holds if long-term U.S. interest rates rise during the time period in which the Fund holds the options. However, if long-term U.S. interest rates decrease, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Adviser. An increase in interest rates may cause the value of securities held directly or indirectly by the Fund to decline to the extent that the Fund's hedging strategy is not effectively implemented. Even if the Fund is hedged against losses due to long-term interest rate increases linked to U.S. interest rates, outright interest rate increases may also lead to heightened volatility in the fixed-income markets and may positively affect the value of the Fund's options while negatively impacting the Fund's investments in U.S. Treasuries. The Fund could lose money on the options held by the Fund, and the present value of the Fund's portfolio investments could decrease if inflation increases. These interest rate-linked options may also cause the Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the U.S. interest rate curve or the price of the options owned by the Fund could materially adversely affect an investment in the Fund. The Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than interest rate risk. Moreover, to the extent that interest rate risk has been priced into the government bonds owned directly or indirectly by the Fund, the Fund could underperform other investments even during periods of rising long-term U.S. interest rates. There is no guarantee that the Fund will have positive performance even in environments of sharply rising U.S. interest rates. There is no guarantee that the Fund will be able to successfully mitigate interest rate risk.

- **Rating Agencies Risk.** Ratings are not an absolute standard of quality, but rather general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely if, in the judgment of the agency establishing the rating, circumstances so warrant. A downward revision or withdrawal of such ratings, or either of them, may have an effect on the liquidity or market price of the securities in which the Fund invests.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund reinvests the proceeds from the disposition of its portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of the Shares.
- **Reverse Repurchase Agreements Risk.** Reverse repurchase agreements are a form of secured borrowing and subject the Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested, resulting in an increase in the speculative character of the Fund's outstanding shares. Reverse repurchase agreements involve the risk that the investment return earned by the Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.
- **Risk of Investing in the United States.** Certain changes in the United States economy, such as when the economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.
- **Securities Lending Risk.** The Fund may engage in securities lending (*i.e.*, lend portfolio securities to institutions, such as certain broker dealers). Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund. The Fund could also experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.
- **Shorting U.S. Treasury Securities Risk.** The Fund may seek short exposure to financial instruments such as U.S. Treasury securities. There is no guarantee that the returns on the Fund's short positions will produce positive returns and the Fund could lose money if the short positions produce negative returns. U.S. Treasury prices are highly sensitive to changes in interest rates and a decrease in yields (increase in prices) could result in significant losses for short positions. Shorting typically requires borrowing securities, which involves reliance on the availability of lenders and custodians. The failure of a counterparty to deliver the securities may impact the Fund's execution of its strategy.

- **Swap Risk.** Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund’s losses.
- **Swaptions Risk:** A “swaption” is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may purchase interest rate payer swaptions. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised.
- **TBA Securities Risk.** In a TBA transaction, a seller agrees to deliver a security at a future date, but does not specify the particular security to be delivered. Instead, the seller agrees to accept any security that meets specified terms. TBA transactions involve the risk that the securities received may have less favorable characteristics than what was anticipated when the Fund entered into the transaction. TBA transactions are also subject to counterparty risk and will be exposed to changes in the value of the underlying investments during the term of the agreement.
- **U.S. Treasury and Agency Market Risk.** The U.S. Treasury and agency market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury and agency obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury and agency obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury and agency obligations to decline. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and are generally considered to have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.
- **Valuation Risk.** The prices provided by the Fund’s pricing services or independent dealers or the fair value determinations made by the valuation committee of the Adviser may be different from the prices used by other funds or from the prices at which securities are actually bought and sold. The prices of certain securities provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.

Performance Information: Performance information for the F/m Yield Curve Steepening Fund is not included because the Fund had not commenced operations prior to the date of this Prospectus. Performance information will be included once the Fund has at least one calendar year of performance. Updated performance information will be available on the Fund’s website at www.fminvest.com.

Management

Investment Adviser

F/m Investments LLC serves as the investment adviser.

Portfolio Managers

Marcin Zdunek	Managing Director, Head of Capital Markets & Portfolio Manager	Inception

Purchase and Sale of F/m Yield Curve Steepening Fund Shares

Shares are listed on a national securities exchange, the Exchange, and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Once available, information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, will be available on the Fund’s website at www.fminvest.com.

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is made through an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Fund’s Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY SECTION – F/m Yield Curve Flattening Strategy ETF (UFLT)

Investment Objective

The investment objective of the F/m Yield Curve Flattening Strategy ETF (the “F/m Yield Curve Flattening Fund” or the “Fund”) is to seek to implement a flattener yield curve strategy that is designed to benefit from the narrowing spread between short-term and long-term U.S. Treasury yields that typically occurs when shorter-maturity rates rise faster than longer-maturity rates, or when longer-maturity rates decline relative to shorter-maturity rates.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the F/m Yield Curve Flattening Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees	0.50%
Distribution (12b-1) Fees	None
Other Expenses	None
Total Annual Fund Operating Expenses	0.50%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that: (1) your investment has a 5% return each year, and (2) the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$51	\$160

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. Portfolio turnover rates may vary from year-to-year, as well as within a year. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. No portfolio turnover rate is provided for the Fund because the Fund had not commenced operations prior to the date of this Prospectus.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to implement a flattener yield curve strategy that is designed to benefit from the narrowing spread between short-term and long-term U.S. Treasury yields that typically occurs when shorter-maturity rates rise faster than longer-maturity rates, or when longer-maturity rates decline relative to shorter-maturity rates.

Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the shape of the yield curve. Specifically, the Fund may:

- Take long positions in longer-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to declining yields at the long end of the curve.
- Take short positions in shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields at the short end of the curve.

The Adviser actively manages the Fund’s positions based on market conditions, macroeconomic trends, and interest rate forecasts. The Fund’s portfolio is constructed and rebalanced periodically to maintain exposure aligned with the yield flattener objective, considering factors such as economic data, Federal Reserve policy, and global interest rate dynamics.

The Fund may also allocate a portion of its assets to cash, cash equivalents, or high-quality short-term instruments for liquidity and collateral purposes. The Fund does not seek to maintain a specific duration target, as its primary focus is on the relative movement between segments of the yield curve.

The Fund may enter into reverse repurchase agreements in amounts not exceeding one-third of the Fund's total assets (including the amount borrowed). The Fund may invest in securities of other affiliated and unaffiliated ETFs registered under the Investment Company Act of 1940, as amended, that invest primarily in Fund eligible investments (collectively, "Underlying Funds") to the extent permitted by applicable law and subject to certain restrictions.

The Fund may also seek to increase its income by lending securities. These loans will be secured by collateral (consisting of cash, U.S. government securities, or irrevocable letters of credit) maintained in an amount equal to at least 100% of the market value, determined daily, of the loaned securities. Cash collateral received by the Fund in connection with its lending of portfolio securities will be invested in short-term investments, including money market funds.

The Fund has elected to qualify each year for treatment as a regulated investment company ("RIC") under Subchapter M of Subtitle A, Chapter 1, of the Internal Revenue Code of 1986, as amended (the "Code").

Principal Investment Risks

The value of the Fund's investments may decrease, which will cause the value of the Fund's Shares to decrease. As a result, you may lose money on your investment in the Fund, and there can be no assurance that the Fund will achieve its investment objective. The Fund's principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Active Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.
- **Affiliated Fund Risk.** Affiliated fund risk is the risk that the Adviser may select investments for the Fund based on its own financial interests or other business considerations rather than the Fund's interests. The Adviser may be subject to potential conflicts of interest in selecting the Underlying Funds because the Underlying Funds pay an advisory fee to the Adviser based on their assets, the fees paid to the Adviser by some affiliated Underlying Funds may be higher than other Underlying Funds or the Underlying Funds may be in need of assets to enhance their appeal to other investors, liquidity and trading and/or to enable them to carry out their investment strategies. However, the Adviser is a fiduciary to the Fund and is legally obligated to act in the Fund's best interest when selecting Underlying Funds.
- **Asset Class Risk.** Securities and other assets in the Fund's portfolio may underperform in comparison to the general financial markets, a particular financial market, or other asset classes.
- **Cash or Cash Equivalents Risk.** At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.
- **Concentration Risk.** The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to a swap contract or other similar investment instrument may default on its payment obligation to the Fund. Such a default may cause the value of an investment in the Fund to decrease.
- **Cyber Security Risk.** Cyber security risk is the risk of an unauthorized breach and access to the Fund's assets, Fund or customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the Adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality or prevent the Fund's investors from purchasing, redeeming or exchanging shares or receiving distributions. While the Fund and the Adviser have established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Further, the Fund cannot control the cybersecurity plans and systems of the Fund's service

providers, market makers, or issuers of securities in which the Fund invests. The Fund and the Adviser have limited ability to prevent or mitigate cyber security incidents affecting third-party service providers, and such third-party service providers may have limited indemnification obligations to the Fund or the Adviser. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact and cause financial losses to the Fund or its shareholders. Issuers of securities in which the Fund invests are also subject to cyber security risks, and the value of these securities could decline if the issuers experience cyber-attacks or other cyber-failures.

- **Derivatives Risk.** A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities will be more volatile and thus more likely to decline in price, and to a greater extent, in a rising interest rate environment than shorter-duration debt securities.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **ETF Risk.** The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant (“AP”) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that are institutional investors and may act as AP. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Note Fund Shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to the Fund Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of the Fund in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF's shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Secondary Market Trading Risk.* Although Shares are intended to be listed on a national securities exchange (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. During periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Shares trade on a stock exchange at prices at, above, or below the Fund's most recent NAV. The Fund's NAV is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Shares fluctuates continuously throughout trading hours on the exchange, based on both the relative market supply of, and demand for, the Shares and the underlying value of the Fund's portfolio holdings. As a result the trading prices of the Shares may deviate from the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines. Any of these factors, among others, may lead to the Shares trading at a premium or discount to NAV.

- **Fixed-Income Market Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities or duration will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.
- **Futures Risk.** Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.
- **High Portfolio Turnover Risk.** The Fund may incur relatively high portfolio turnover. The active and frequent trading of the Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Illiquid Investments Risk.** The possible lack of a liquid secondary market for derivatives and the resulting inability of the Fund to sell or otherwise close a derivatives position could expose the Fund to losses and could make derivatives more difficult for the Fund to value accurately.
- **Income Risk.** The Fund's income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity or are called, or the Fund otherwise needs to purchase additional bonds.
- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income the Fund receives from it but will generally affect the value of your investment in the Fund. Changes in interest rates may also affect the liquidity of the Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. The Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by the Fund and have a negative impact on the Fund's performance and NAV. Rising interest rates may prompt redemptions from the Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, the Fund may have a very low or even negative yield. A low or negative yield would cause the Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by the Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that the Fund will not be able to manage this risk effectively.
- **Issuer Risk.** The performance of the Fund depends on the performance of individual securities or other assets to which the Fund has exposure. The value of securities or other assets may decline, or perform differently from the market as a whole, due to changes in the financial condition or credit rating of the issuer or counterparty.

- **Leverage Risk.** Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of other funds that do not use such techniques.
- **Liquidity Risk.** Certain securities held by the Fund may be difficult (or impossible) to sell at the time and at the price the Adviser would like. As a result, the Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that the Fund may lose money or be prevented from realizing capital gains if it cannot sell a security at a particular time and price.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors including economic, political, financial, public health crises (such as epidemics or pandemics), war, acts of terrorism, recessions or other disruptive events (whether real, expected or perceived) in the local, regional or global markets. These factors could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund’s NAV. As a result, an investor could lose money over short periods of time due to short-term market movements or long periods of time during prolonged market downturns.
- **Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund’s creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s NAV.
- **New Fund Risk.** The Fund is a newly organized management investment company with no operating history. In addition, there can be no assurance that the Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the “Board”) of The RBB Fund, Inc. (the “Company”) may determine to liquidate the Fund.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.
- **Options Risk.** When the Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. The Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.
- **Over-the-Counter Market Risk.** Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.
- **Pricing Risk.** If market conditions make it difficult to value some investments, the Fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment’s sale. As a result, you could pay more than the market value when buying Fund Shares or receive less than the market value when selling Fund Shares.
- **Rate-Linked Derivatives Risk.** The Fund’s exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile. The value of such

investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. The Fund is expected to benefit from the options it holds if long-term U.S. interest rates rise during the time period in which the Fund holds the options. However, if long-term U.S. interest rates decrease, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Adviser. An increase in interest rates may cause the value of securities held directly or indirectly by the Fund to decline to the extent that the Fund's hedging strategy is not effectively implemented. Even if the Fund is hedged against losses due to long-term interest rate increases linked to U.S. interest rates, outright interest rate increases may also lead to heightened volatility in the fixed-income markets and may positively affect the value of the Fund's options while negatively impacting the Fund's investments in U.S. Treasuries. The Fund could lose money on the options held by the Fund, and the present value of the Fund's portfolio investments could decrease if inflation increases. These interest rate-linked options may also cause the Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the U.S. interest rate curve or the price of the options owned by the Fund could materially adversely affect an investment in the Fund. The Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than interest rate risk. Moreover, to the extent that interest rate risk has been priced into the government bonds owned directly or indirectly by the Fund, the Fund could underperform other investments even during periods of rising long-term U.S. interest rates. There is no guarantee that the Fund will have positive performance even in environments of sharply rising U.S. interest rates. There is no guarantee that the Fund will be able to successfully mitigate interest rate risk.

- **Rating Agencies Risk.** Ratings are not an absolute standard of quality, but rather general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely if, in the judgment of the agency establishing the rating, circumstances so warrant. A downward revision or withdrawal of such ratings, or either of them, may have an effect on the liquidity or market price of the securities in which the Fund invests.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund reinvests the proceeds from the disposition of its portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of the Shares.
- **Reverse Repurchase Agreements Risk.** Reverse repurchase agreements are a form of secured borrowing and subject the Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested, resulting in an increase in the speculative character of the Fund's outstanding shares. Reverse repurchase agreements involve the risk that the investment return earned by the Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.
- **Risk of Investing in the United States.** Certain changes in the United States economy, such as when the economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.
- **Securities Lending Risk.** The Fund may engage in securities lending (*i.e.*, lend portfolio securities to institutions, such as certain broker dealers). Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in the value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund. The Fund could also experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.
- **Shorting U.S. Treasury Securities Risk.** The Fund may seek short exposure to financial instruments such as U.S. Treasury securities. There is no guarantee that the returns on the Fund's short positions will produce positive returns and the Fund could lose money if the short positions produce negative returns. U.S. Treasury prices are highly sensitive to changes in interest rates and a decrease in yields (increase in prices) could result in significant losses for short positions. Shorting typically requires borrowing securities, which involves reliance on the availability of lenders and custodians. The failure of a counterparty to deliver the securities may impact the Fund's execution of its strategy.

- **Swap Risk.** Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund’s losses.
- **Swaptions Risk.** A “swaption” is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may purchase interest rate payer swaptions. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised.
- **TBA Securities Risk.** In a TBA transaction, a seller agrees to deliver a security at a future date, but does not specify the particular security to be delivered. Instead, the seller agrees to accept any security that meets specified terms. TBA transactions involve the risk that the securities received may have less favorable characteristics than what was anticipated when the Fund entered into the transaction. TBA transactions are also subject to counterparty risk and will be exposed to changes in the value of the underlying investments during the term of the agreement.
- **U.S. Treasury and Agency Market Risk.** The U.S. Treasury and agency market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury and agency obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury and agency obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury and agency obligations to decline. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and are generally considered to have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.
- **Valuation Risk.** The prices provided by the Fund’s pricing services or independent dealers or the fair value determinations made by the valuation committee of the Adviser may be different from the prices used by other funds or from the prices at which securities are actually bought and sold. The prices of certain securities provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.

Performance Information: Performance information for the Fund is not included because the Fund had not commenced operations prior to the date of this Prospectus. Performance information will be included once the Fund has at least one calendar year of performance. Updated performance information will be available on the Fund’s website at www.fminvest.com.

Management

Investment Adviser

F/m Investments LLC serves as the investment adviser.

Portfolio Managers

Team Member	Primary Titles	Start Date with F/m Yield Curve Flattening Fund
Peter Baden	Managing Director, Director of Fixed Income Strategy	Inception
Alexander Morris	Chief Executive Officer	Inception
Marcin Zdunek	Managing Director, Head of Capital Markets & Portfolio Manager	Inception

Purchase and Sale of F/m Yield Curve Flattening Fund Shares

Shares are intended to be listed on a national securities exchange, the Exchange, and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Once available, information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, will be available on the Fund’s website at www.fminvest.com.

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is made through an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Fund’s Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY SECTION – F/m Rising Interest Rates Strategy ETF (URIZ)

Investment Objective

The investment objective of the F/m Rising Interest Rates Strategy ETF (the “F/m Rising Rates Fund” or the “Fund”) is to seek to implement a rising rate strategy that is designed to benefit from rising interest rates in both short-term and long-term U.S. Treasury yields.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the F/m Rising Rates Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees	0.50%
Distribution (12b-1) Fees	None
Other Expenses	None
Total Annual Fund Operating Expenses	0.50%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that: (1) your investment has a 5% return each year, and (2) the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$51	\$160

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. Portfolio turnover rates may vary from year-to-year, as well as within a year. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. No portfolio turnover rate is provided for the Fund because the Fund had not commenced operations prior to the date of this Prospectus.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to implement a rising rate strategy that is designed to benefit from rising interest rates in both short-term and long-term U.S. Treasury yields.

Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the direction of interest rates. Specifically, the Fund may:

- Take short positions in longer-duration and shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields across the curve.
- Take long positions in U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to areas of the yield curve where yields may fall or rise less than other parts of the curve.

The Adviser actively manages the Fund’s positions based on market conditions, macroeconomic trends, and interest rate forecasts. The Fund’s portfolio is constructed and rebalanced periodically to maintain exposure aligned with rising rates strategy, considering factors such as economic data, Federal Reserve policy, and global interest rate dynamics.

The Fund may also allocate a portion of its assets to cash, cash equivalents, or high-quality short-term instruments for liquidity and collateral purposes. The Fund does not seek to maintain a specific duration target, as its primary focus is on the relative movement between segments of the yield curve.

The Fund may enter into reverse repurchase agreements in amounts not exceeding one-third of the Fund's total assets (including the amount borrowed). The Fund may invest in securities of other affiliated and unaffiliated ETFs registered under the Investment Company Act of 1940, as amended, that invest primarily in Fund eligible investments (collectively, "Underlying Funds") to the extent permitted by applicable law and subject to certain restrictions.

The Fund may also seek to increase its income by lending securities. These loans will be secured by collateral (consisting of cash, U.S. government securities, or irrevocable letters of credit) maintained in an amount equal to at least 100% of the market value, determined daily, of the loaned securities. Cash collateral received by the Fund in connection with its lending of portfolio securities will be invested in short-term investments, including money market funds.

The Fund has elected to qualify each year for treatment as a regulated investment company ("RIC") under Subchapter M of Subtitle A, Chapter 1, of the Internal Revenue Code of 1986, as amended (the "Code").

Principal Investment Risks

The value of the Fund's investments may decrease, which will cause the value of the Fund's Shares to decrease. As a result, you may lose money on your investment in the Fund, and there can be no assurance that the Fund will achieve its investment objective. The Fund's principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Active Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.
- **Affiliated Fund Risk.** Affiliated fund risk is the risk that the Adviser may select investments for the Fund based on its own financial interests or other business considerations rather than the Fund's interests. The Adviser may be subject to potential conflicts of interest in selecting the Underlying Funds because the Underlying Funds pay an advisory fee to the Adviser based on their assets, the fees paid to the Adviser by some affiliated Underlying Funds may be higher than other Underlying Funds or the Underlying Funds may be in need of assets to enhance their appeal to other investors, liquidity and trading and/or to enable them to carry out their investment strategies. However, the Adviser is a fiduciary to the Fund and is legally obligated to act in the Fund's best interest when selecting Underlying Funds.
- **Asset Class Risk.** Securities and other assets in the Fund's portfolio may underperform in comparison to the general financial markets, a particular financial market, or other asset classes.
- **Cash or Cash Equivalents Risk.** At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.
- **Concentration Risk.** The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to a swap contract or other similar investment instrument may default on its payment obligation to the Fund. Such a default may cause the value of an investment in the Fund to decrease.
- **Cyber Security Risk.** Cyber security risk is the risk of an unauthorized breach and access to the Fund's assets, Fund or customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the Adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality or prevent the Fund's investors from purchasing, redeeming or exchanging shares or receiving distributions. While the Fund and the Adviser have established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Further, the Fund cannot control the cybersecurity plans and systems of the Fund's service

providers, market makers, or issuers of securities in which the Fund invests. The Fund and the Adviser have limited ability to prevent or mitigate cyber security incidents affecting third-party service providers, and such third-party service providers may have limited indemnification obligations to the Fund or the Adviser. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact and cause financial losses to the Fund or its shareholders. Issuers of securities in which the Fund invests are also subject to cyber security risks, and the value of these securities could decline if the issuers experience cyber-attacks or other cyber-failures.

- **Derivatives Risk.** A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities will be more volatile and thus more likely to decline in price, and to a greater extent, in a rising interest rate environment than shorter-duration debt securities.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **ETF Risk.** The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant (“AP”) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that are institutional investors and may act as AP. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund Shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to the Fund Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of the Fund in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF's shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Secondary Market Trading Risk.* Although Shares are intended to be listed on a national securities exchange (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. During periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Shares trade on a stock exchange at prices at, above, or below the Fund's most recent NAV. The Fund's NAV is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Shares fluctuates continuously throughout trading hours on the exchange, based on both the relative market supply of, and demand for, the Shares and the underlying value of the Fund's portfolio holdings. As a result the trading prices of the Shares may deviate from the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines. Any of these factors, among others, may lead to the Shares trading at a premium or discount to NAV.

- **Fixed-Income Market Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities or duration will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.
- **Futures Risk.** Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.
- **High Portfolio Turnover Risk.** The Fund may incur relatively high portfolio turnover. The active and frequent trading of the Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Illiquid Investments Risk.** The possible lack of a liquid secondary market for derivatives and the resulting inability of the Fund to sell or otherwise close a derivatives position could expose the Fund to losses and could make derivatives more difficult for the Fund to value accurately.
- **Income Risk.** The Fund's income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity or are called, or the Fund otherwise needs to purchase additional bonds.
- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income the Fund receives from it but will generally affect the value of your investment in the Fund. Changes in interest rates may also affect the liquidity of the Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. The Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by the Fund and have a negative impact on the Fund's performance and NAV. Rising interest rates may prompt redemptions from the Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, the Fund may have a very low or even negative yield. A low or negative yield would cause the Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by the Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that the Fund will not be able to manage this risk effectively.
- **Issuer Risk.** The performance of the Fund depends on the performance of individual securities or other assets to which the Fund has exposure. The value of securities or other assets may decline, or perform differently from the market as a whole, due to changes in the financial condition or credit rating of the issuer or counterparty.

- **Leverage Risk.** Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of other funds that do not use such techniques.
- **Liquidity Risk.** Certain securities held by the Fund may be difficult (or impossible) to sell at the time and at the price the Adviser would like. As a result, the Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that the Fund may lose money or be prevented from realizing capital gains if it cannot sell a security at a particular time and price.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors including economic, political, financial, public health crises (such as epidemics or pandemics) or other disruptive events (whether real, expected or perceived) in the U.S. and global markets. As a result, an investor could lose money over short or long periods of time.
- **Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund’s creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s NAV.
- **New Fund Risk.** The Fund is a newly organized management investment company with no operating history. In addition, there can be no assurance that the Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the “Board”) of The RBB Fund, Inc. (the “Company”) may determine to liquidate the Fund.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.
- **Options Risk.** When the Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. The Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.
- **Over-the-Counter Market Risk.** Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.
- **Pricing Risk.** If market conditions make it difficult to value some investments, the Fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment’s sale. As a result, you could pay more than the market value when buying Fund Shares or receive less than the market value when selling Fund Shares.
- **Rate-Linked Derivatives Risk.** The Fund’s exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile. The value of such investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. The Fund is expected to benefit from the options it holds

if long-term U.S. interest rates rise during the time period in which the Fund holds the options. However, if long-term U.S. interest rates decrease, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Adviser. An increase in interest rates may cause the value of securities held directly or indirectly by the Fund to decline to the extent that the Fund's hedging strategy is not effectively implemented. Even if the Fund is hedged against losses due to long-term interest rate increases linked to U.S. interest rates, outright interest rate increases may also lead to heightened volatility in the fixed-income markets and may positively affect the value of the Fund's options while negatively impacting the Fund's investments in U.S. Treasuries. The Fund could lose money on the options held by the Fund, and the present value of the Fund's portfolio investments could decrease if inflation increases. These interest rate-linked options may also cause the Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the U.S. interest rate curve or the price of the options owned by the Fund could materially adversely affect an investment in the Fund. The Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than interest rate risk. Moreover, to the extent that interest rate risk has been priced into the government bonds owned directly or indirectly by the Fund, the Fund could underperform other investments even during periods of rising long-term U.S. interest rates. There is no guarantee that the Fund will have positive performance even in environments of sharply rising U.S. interest rates. There is no guarantee that the Fund will be able to successfully mitigate interest rate risk.

- **Rating Agencies Risk.** Ratings are not an absolute standard of quality, but rather general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely if, in the judgment of the agency establishing the rating, circumstances so warrant. A downward revision or withdrawal of such ratings, or either of them, may have an effect on the liquidity or market price of the securities in which the Fund invests.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund reinvests the proceeds from the disposition of its portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of the Shares.
- **Reverse Repurchase Agreements Risk.** Reverse repurchase agreements are a form of secured borrowing and subject the Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested, resulting in an increase in the speculative character of the Fund's outstanding shares. Reverse repurchase agreements involve the risk that the investment return earned by the Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.
- **Risk of Investing in the United States.** Certain changes in the United States economy, such as when the economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.
- **Securities Lending Risk.** The Fund may engage in securities lending (*i.e.*, lend portfolio securities to institutions, such as certain broker dealers). Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in the value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund. The Fund could also experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.
- **Shorting U.S. Treasury Securities Risk.** The Fund may seek short exposure to financial instruments such as U.S. Treasury securities. There is no guarantee that the returns on the Fund's short positions will produce positive returns and the Fund could lose money if the short positions produce negative returns. U.S. Treasury prices are highly sensitive to changes in interest rates and a decrease in yields (increase in prices) could result in significant losses for short positions. Shorting typically requires borrowing securities, which involves reliance on the availability of lenders and custodians. The failure of a counterparty to deliver the securities may impact the Fund's execution of its strategy.
- **Swap Risk.** Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund's losses.

- **Swaptions Risk.** A “swaption” is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may purchase interest rate payer swaptions. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised.
- **TBA Securities Risk.** In a TBA transaction, a seller agrees to deliver a security at a future date, but does not specify the particular security to be delivered. Instead, the seller agrees to accept any security that meets specified terms. TBA transactions involve the risk that the securities received may have less favorable characteristics than what was anticipated when the Fund entered into the transaction. TBA transactions are also subject to counterparty risk and will be exposed to changes in the value of the underlying investments during the term of the agreement.
- **U.S. Treasury and Agency Market Risk.** The U.S. Treasury and agency market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury and agency obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury and agency obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury and agency obligations to decline. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and are generally considered to have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.
- **Valuation Risk.** The prices provided by the Fund’s pricing services or independent dealers or the fair value determinations made by the valuation committee of the Adviser may be different from the prices used by other funds or from the prices at which securities are actually bought and sold. The prices of certain securities provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.

Performance Information: Performance information for the Fund is not included because the Fund had not commenced operations prior to the date of this Prospectus. Performance information will be included once the Fund has at least one calendar year of performance. Updated performance information will be available on the Fund’s website at www.fminvest.com.

Management

Investment Adviser

F/m Investments LLC serves as the investment adviser.

Portfolio Managers

Team Member	Primary Titles	Start Date with F/m Rising Rates Fund
Peter Baden	Managing Director, Director of Fixed Income Strategy	Inception
Alexander Morris	Chief Executive Officer	Inception
Marcin Zdunek	Managing Director, Head of Capital Markets & Portfolio Manager	Inception

Purchase and Sale of F/m Rising Rates Fund Shares

Shares are intended to be listed on a national securities exchange, the Exchange, and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for

Shares (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Once available, information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, will be available on the Fund’s website at www.fminvest.com.

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is made through an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Fund’s Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY SECTION – F/m Falling Interest Rates Strategy ETF (UFAL)

Investment Objective

The investment objective of the F/m Falling Interest Rates Strategy ETF (the “F/m Falling Rates Fund” or the “Fund”) is to seek to implement a falling rate strategy that is designed to benefit from falling interest rates in both short-term and long-term U.S. Treasury yields.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the F/m Falling Rates Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees	0.50%
Distribution (12b-1) Fees	None
Other Expenses	None
Total Annual Fund Operating Expenses	0.50%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that: (1) your investment has a 5% return each year, and (2) the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$51	\$160

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. Portfolio turnover rates may vary from year-to-year, as well as within a year. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. No portfolio turnover rate is provided for the Fund because the Fund had not commenced operations prior to the date of this Prospectus.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to implement a falling rate strategy that is designed to benefit from falling interest rates in both short-term and long-term U.S. Treasury yields.

Under normal market conditions, F/m Investments LLC (the “Adviser”) seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the direction of interest rates. Specifically, the Fund may:

- Take long positions in longer-duration and shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to falling yields across the curve.
- Take short positions in U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to areas of the yield curve where yields may rise or fall less than other parts of the curve.

The Adviser actively manages the Fund’s positions based on market conditions, macroeconomic trends, and interest rate forecasts. The Fund’s portfolio is constructed and rebalanced periodically to maintain exposure aligned with the rising rates view, considering factors such as economic data, Federal Reserve policy, and global interest rate dynamics.

The Fund may also allocate a portion of its assets to cash, cash equivalents, or high-quality short-term instruments for liquidity and collateral purposes. The Fund does not seek to maintain a specific duration target, as its primary focus is on the relative movement between segments of the yield curve.

The Fund may enter into reverse repurchase agreements in amounts not exceeding one-third of the Fund's total assets (including the amount borrowed). The Fund may invest in securities of other affiliated and unaffiliated ETFs registered under the Investment Company Act of 1940, as amended, that invest primarily in Fund eligible investments (collectively, "Underlying Funds") to the extent permitted by applicable law and subject to certain restrictions.

The Fund may also seek to increase its income by lending securities. These loans will be secured by collateral (consisting of cash, U.S. government securities, or irrevocable letters of credit) maintained in an amount equal to at least 100% of the market value, determined daily, of the loaned securities. Cash collateral received by the Fund in connection with its lending of portfolio securities will be invested in short-term investments, including money market funds.

The Fund has elected to qualify each year for treatment as a regulated investment company ("RIC") under Subchapter M of Subtitle A, Chapter 1, of the Internal Revenue Code of 1986, as amended (the "Code").

Principal Investment Risks

The value of the Fund's investments may decrease, which will cause the value of the Fund's Shares to decrease. As a result, you may lose money on your investment in the Fund, and there can be no assurance that the Fund will achieve its investment objective. The Fund's principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Active Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.
- **Affiliated Fund Risk.** Affiliated fund risk is the risk that the Adviser may select investments for the Fund based on its own financial interests or other business considerations rather than the Fund's interests. The Adviser may be subject to potential conflicts of interest in selecting the Underlying Funds because the Underlying Funds pay an advisory fee to the Adviser based on their assets, the fees paid to the Adviser by some affiliated Underlying Funds may be higher than other Underlying Funds or the Underlying Funds may be in need of assets to enhance their appeal to other investors, liquidity and trading and/or to enable them to carry out their investment strategies. However, the Adviser is a fiduciary to the Fund and is legally obligated to act in the Fund's best interest when selecting Underlying Funds.
- **Asset Class Risk.** The securities and other assets in the Fund's portfolio may underperform in comparison to financial markets generally, a particular financial market, or other asset classes.
- **Cash or Cash Equivalents Risk.** At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.
- **Concentration Risk.** The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to a swap contract or other similar investment instrument may default on its payment obligation to the Fund. Such a default may cause the value of an investment in the Fund to decrease.
- **Cyber Security Risk.** Cyber security risk is the risk of an unauthorized breach and access to the Fund's assets, Fund or customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the Adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality or prevent the Fund's investors from purchasing, redeeming or exchanging shares or receiving distributions. While the Fund and the Adviser have established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Further, the Fund cannot control the cybersecurity plans and systems of the Fund's service

providers, market makers, or issuers of securities in which the Fund invests. The Fund and the Adviser have limited ability to prevent or mitigate cyber security incidents affecting third-party service providers, and such third-party service providers may have limited indemnification obligations to the Fund or the Adviser. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact and cause financial losses to the Fund or its shareholders. Issuers of securities in which the Fund invests are also subject to cyber security risks, and the value of these securities could decline if the issuers experience cyber-attacks or other cyber-failures.

- **Derivatives Risk.** A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities will be more volatile and thus more likely to decline in price, and to a greater extent, in a rising interest rate environment than shorter-duration debt securities.
- **Early Close/Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **ETF Risk.** The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant (“AP”) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that are institutional investors and may act as AP. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund Shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to the Fund Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of the Fund in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF's shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Secondary Market Trading Risk.* Although Shares are intended to be listed on a national securities exchange (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. During periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Shares trade on a stock exchange at prices at, above, or below the Fund's most recent NAV. The Fund's NAV is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Shares fluctuates continuously throughout trading hours on the exchange, based on both the relative market supply of, and demand for, the Shares and the underlying value of the Fund's portfolio holdings. As a result the trading prices of the Shares may deviate from the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines. Any of these factors, among others, may lead to the Shares trading at a premium or discount to NAV.

- **Fixed-Income Market Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities or duration will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.
- **Futures Risk.** Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.
- **High Portfolio Turnover Risk.** The Fund may incur relatively high portfolio turnover. The active and frequent trading of the Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Illiquid Investments Risk.** The possible lack of a liquid secondary market for derivatives and the resulting inability of the Fund to sell or otherwise close a derivatives position could expose the Fund to losses and could make derivatives more difficult for the Fund to value accurately.
- **Income Risk.** The Fund's income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity or are called, or the Fund otherwise needs to purchase additional bonds.
- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income the Fund receives from it but will generally affect the value of your investment in the Fund. Changes in interest rates may also affect the liquidity of the Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. The Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by the Fund and have a negative impact on the Fund's performance and NAV. Rising interest rates may prompt redemptions from the Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, the Fund may have a very low or even negative yield. A low or negative yield would cause the Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by the Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that the Fund will not be able to manage this risk effectively.
- **Issuer Risk.** The performance of the Fund depends on the performance of individual securities or other assets to which the Fund has exposure. The value of securities or other assets may decline, or perform differently from the market as a whole, due to changes in the financial condition or credit rating of the issuer or counterparty.

- **Leverage Risk.** Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of other funds that do not use such techniques.
- **Liquidity Risk.** Certain securities held by the Fund may be difficult (or impossible) to sell at the time and at the price the Adviser would like. As a result, the Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that the Fund may lose money or be prevented from realizing capital gains if it cannot sell a security at a particular time and price.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors including economic, political, financial, public health crises (such as epidemics or pandemics), war, acts of terrorism, recessions or other disruptive events (whether real, expected or perceived) in the local, regional or global markets. These factors could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund’s NAV. As a result, an investor could lose money over short periods due to short-term market movements or long periods of time during prolonged market downturns.
- **Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund’s creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s NAV.
- **New Fund Risk.** The Fund is a newly organized management investment company with no operating history. In addition, there can be no assurance that the Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the “Board”) of The RBB Fund, Inc. (the “Company”) may determine to liquidate the Fund.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.
- **Options Risk.** When the Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. The Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.
- **Over-the-Counter Market Risk.** Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.
- **Pricing Risk.** If market conditions make it difficult to value some investments, the Fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment’s sale. As a result, you could pay more than the market value when buying Fund Shares or receive less than the market value when selling Fund Shares.
- **Rate-Linked Derivatives Risk.** The Fund’s exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile. The value of such

investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. The Fund is expected to benefit from the options it holds if long-term U.S. interest rates rise during the time period in which the Fund holds the options. However, if long-term U.S. interest rates decrease, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Adviser. An increase in interest rates may cause the value of securities held directly or indirectly by the Fund to decline to the extent that the Fund's hedging strategy is not effectively implemented. Even if the Fund is hedged against losses due to long-term interest rate increases linked to U.S. interest rates, outright interest rate increases may also lead to heightened volatility in the fixed-income markets and may positively affect the value of the Fund's options while negatively impacting the Fund's investments in U.S. Treasuries. The Fund could lose money on the options held by the Fund, and the present value of the Fund's portfolio investments could decrease if inflation increases. These interest rate-linked options may also cause the Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the U.S. interest rate curve or the price of the options owned by the Fund could materially adversely affect an investment in the Fund. The Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than interest rate risk. Moreover, to the extent that interest rate risk has been priced into the government bonds owned directly or indirectly by the Fund, the Fund could underperform other investments even during periods of rising long-term U.S. interest rates. There is no guarantee that the Fund will have positive performance even in environments of sharply rising U.S. interest rates. There is no guarantee that the Fund will be able to successfully mitigate interest rate risk.

- **Rating Agencies Risk.** Ratings are not an absolute standard of quality, but rather general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely if, in the judgment of the agency establishing the rating, circumstances so warrant. A downward revision or withdrawal of such ratings, or either of them, may have an effect on the liquidity or market price of the securities in which the Fund invests.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund reinvests the proceeds from the disposition of its portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of the Shares.
- **Reverse Repurchase Agreements Risk.** Reverse repurchase agreements are a form of secured borrowing and subject the Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested, resulting in an increase in the speculative character of the Fund's outstanding shares. Reverse repurchase agreements involve the risk that the investment return earned by the Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.
- **Risk of Investing in the United States.** Certain changes in the United States economy, such as when the economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.
- **Securities Lending Risk.** The Fund may engage in securities lending (*i.e.*, lend portfolio securities to institutions, such as certain broker dealers). Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in the value of the collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund. The Fund could also experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.
- **Shorting U.S. Treasury Securities Risk.** The Fund may seek short exposure to financial instruments such as U.S. Treasury securities. There is no guarantee that the returns on the Fund's short positions will produce positive returns and the Fund could lose money if the short positions produce negative returns. U.S. Treasury prices are highly sensitive to changes in interest rates and a decrease in yields (increase in prices) could result in significant losses for short positions. Shorting typically requires borrowing securities, which involves reliance on the availability of lenders and custodians. The failure of a counterparty to deliver the securities may impact the Fund's execution of its strategy.

- **Swap Risk.** Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund’s losses.
- **Swaptions Risk.** A “swaption” is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may purchase interest rate payer swaptions. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised.
- **TBA Securities Risk.** In a TBA transaction, a seller agrees to deliver a security at a future date, but does not specify the particular security to be delivered. Instead, the seller agrees to accept any security that meets specified terms. TBA transactions involve the risk that the securities received may have less favorable characteristics than what was anticipated when the Fund entered into the transaction. TBA transactions are also subject to counterparty risk and will be exposed to changes in the value of the underlying investments during the term of the agreement.
- **U.S. Treasury and Agency Market Risk.** The U.S. Treasury and agency market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury and agency obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury and agency obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury and agency obligations to decline. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and are generally considered to have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.
- **Valuation Risk.** The prices provided by the Fund’s pricing services or independent dealers or the fair value determinations made by the valuation committee of the Adviser may be different from the prices used by other funds or from the prices at which securities are actually bought and sold. The prices of certain securities provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.

Performance Information: Performance information for the Fund is not included because the Fund had not commenced operations prior to the date of this Prospectus. Performance information will be included once the Fund has at least one calendar year of performance. Updated performance information will be available on the Fund’s website at www.fminvest.com.

Management

Investment Adviser

F/m Investments LLC serves as the investment adviser.

Portfolio Managers

Team Member	Primary Titles	Start Date with F/m Falling Rates Fund
Peter Baden	Managing Director, Director of Fixed Income Strategy	Inception
Alexander Morris	Chief Executive Officer	Inception
Marcin Zdunek	Managing Director, Head of Capital Markets & Portfolio Manager	Inception

Purchase and Sale of F/m Falling Rates Fund Shares

Shares are intended to be listed on a national securities exchange, the Exchange, and investors can only buy and sell Shares through brokers or dealers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Once available, information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, will be available on the Fund’s website at www.fminvest.com.

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is made through an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Fund’s Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

The investment objective of each Fund is to seek investment results as described in the “Investment Objective” section of that Fund’s summary prospectus above. Each Fund’s investment objective has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon sixty (60) days’ written notice to shareholders.

Portfolio Composition

Each Fund has a policy to invest, under normal market conditions, at least 80% of its net assets (plus any borrowings for investment purposes) in the types of investment shown next to the Fund’s name in the table below (each, an “80% Policy”).

Fund	Types of Investments for Purposes of 80% Policy
<i>F/m Ultrashort Treasury Inflation-Protected Security (TIPS) ETF (RBIL)</i>	Under normal market conditions, the Adviser seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in TIPS with a maturity of 1-13 months. Under normal market conditions, the Fund generally invests substantially all of its assets in the securities comprising the Underlying Index and in securities that the Adviser determines to have economic characteristics that are substantially identical to the economic characteristics of the securities that comprise the Underlying Index, including, but not limited to, bonds that are capital-indexed and linked to a commonly used domestic inflation index.
<i>F/m Yield Curve Steepening Strategy ETF (USTP)</i>	Under normal market conditions, the Adviser seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the shape of the yield curve. Specifically, the ETF may: (i) take short positions in longer-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields at the long end of the curve and/or (ii) take long positions in shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to falling yields at the short end of the curve.
<i>F/m Yield Curve Flattening Strategy ETF (UFLT)</i>	Under normal market conditions, the Adviser seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the shape of the yield curve. Specifically, the Fund may: (i) take long positions in longer-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to declining yields at the long end of the curve and/or (ii) take short positions in shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields at the short end of the curve.
<i>F/m Rising Interest Rates Strategy ETF (URIZ)</i>	Under normal market conditions, the Adviser seeks to achieve the Fund’s investment objective by investing at least 80% of the Fund’s net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the direction of interest rates. Specifically, the Fund may: (i) take short positions in longer-duration and shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to rising yields across the curve and/or (ii) take long positions in U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to areas of the yield curve where yields may fall or rise less than other parts of the curve.

Fund	Types of Investments for Purposes of 80% Policy
<i>F/m Falling Interest Rates Strategy ETF (UFAL)</i>	<p>Under normal market conditions, the Adviser seeks to achieve the Fund's investment objective by investing at least 80% of the Fund's net assets (plus any borrowings for investment purposes) in a combination of long and short positions in U.S. Treasury securities or derivatives, such as U.S. Treasury futures, interest rate swaps, and options, to express a view on the direction of interest rates. Specifically, the Fund may: (i) take long positions in longer-duration and shorter-duration U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to falling yields across the curve and/or (ii) take short positions in U.S. Treasury securities or derivatives or affiliated ETFs to gain exposure to areas of the yield curve where yields may rise or fall less than other parts of the curve.</p>

Each Fund's 80% Policy is non-fundamental and can be changed by the Board upon sixty (60) days' prior notice to shareholders. Each Fund must comply with its 80% Policy at the time the Fund invests its assets. Accordingly, when a Fund no longer meets the 80% requirement as a result of circumstances beyond its control, such as changes in the value of portfolio holdings, the Fund would not have to sell its holdings, but any new investments it makes would be consistent with its 80% Policy.

Additional Principal Risk Information

The value of the Funds' investments may decrease, which will cause the value of the Fund's Shares to decrease. As a result, you may lose money on your investment in any of the Funds, and there can be no assurance that any of the Funds will achieve its investment objective. An investment in the Funds is subject to one or more of the principal risks discussed below.

- **Affiliated Fund Risk.** Each of the Funds may invest in affiliated an unaffiliated Underlying Funds. When the Adviser invests a Fund's assets in an Underlying Fund that is also managed by the Adviser, the risk presented is that, due to its own financial interest or other business considerations, the Adviser may have had an incentive to make that investment in lieu of investments by the Fund directly in portfolio securities, or in lieu of investment in Underlying Funds sponsored or managed by others. This conflict of interest may be amplified when an Underlying Fund has low assets.
- **Asset Class Risk.** The securities and other assets in any of the Funds' portfolios may underperform in comparison to other securities or indexes that track other countries, groups of countries, regions, industries, groups of industries, markets, market segments, asset classes or sectors. Various types of securities, currencies and indexes may experience cycles of outperformance in comparison to the general financial markets, depending on a number of factors, including, but not limited to, inflation, interest rates, productivity, global demand for local products or resources, and regulation and governmental controls. This may cause any of the Funds to underperform other investment vehicles that invest in different asset classes.
- **Concentration Risk.** Any of the Funds may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to a Fund's investments in yield curve spread options may default on its payment obligation to such Fund. Such a default may cause the value of an investment in such Fund to decrease.
- **Credit Risk.** The value of your investment in any of the Fund's may change in response to changes in the credit ratings of such Fund's portfolio securities, including with respect to Underlying Funds. Generally, investment risk and price volatility increase as a security's credit rating declines. The financial condition of an issuer of a fixed income security held by such Fund or an Underlying Fund may cause it to default or become unable to pay interest or principal due on the security. The value of any underlying collateral, the creditworthiness of the borrower and the priority of the lien are each of great importance. The Adviser cannot guarantee the adequacy of the protection of the Fund's or an Underlying Fund's interests, including the validity or enforceability of the loan and the maintenance of the anticipated priority and perfection of the applicable security interests. Furthermore, the Adviser cannot assure that claims may not be asserted that might interfere with enforcement of the rights of the holder(s) of the relevant debt.
- **Cyber Security Risk.** With the increased use of technologies such as the internet to conduct business, any of the Funds are susceptible to operational, information security and related risks. In general, cyber incidents can result from deliberate attacks or unintentional events. Cyber-attacks include, but are not limited to, gaining unauthorized access to digital systems (e.g., through "hacking" or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data, or causing operational disruption. Cyber-attacks may also be carried out in a manner that does not require

gaining unauthorized access, such as causing denial-of-service attacks on websites (i.e., efforts to make network services unavailable to intended users). Cyber security failures or breaches by the Adviser and other service providers (including, but not limited to, any of the Funds' accountant, custodian, transfer agent and administrator), and the issuers of securities in which the Fund invests, have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, interference with any of the Funds' ability to calculate its NAV, impediments to trading, the inability of Fund shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs. The use of artificial intelligence and machine learning could exacerbate these risks or result in cyber security incidents that implicate personal data. In addition, substantial costs may be incurred in order to prevent any cyber incidents in the future. While the Adviser has established business continuity plans in the event of, and risk management systems to prevent, such cyber-attacks, there are inherent limitations in such plans and systems including the possibility that certain risks have not been identified. Furthermore, the Funds cannot control the cyber security plans and systems put in place by service providers to the Funds and issuers in which the Funds invest. The Funds and their shareholders could be negatively impacted as a result.

- **Derivatives Risk.** A Fund may gain exposure to different asset classes by investing in derivative instruments. Derivatives can be more sensitive to changes in interest rates or to sudden fluctuations in market prices than conventional securities, which can result in greater losses for a Fund. In addition, the prices of the derivative instruments and the prices of underlying interest rates they are designed to reflect may not move together as expected. A risk of a Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the relevant underlying rate to which it relates. Derivatives are usually traded on margin, which may subject a Fund to margin calls. Margin calls may force such Fund to liquidate assets.
- **Duration Risk.** Duration is a measure of the price sensitivity of a debt security or portfolio to interest rate changes. Duration risk is the risk that longer-duration debt securities are more volatile and thus more likely to decline in price, and to a greater extent, than shorter-duration debt securities, in a rising interest-rate environment. "Effective duration" attempts to measure the expected percentage change in the value of a bond or portfolio resulting from a change in prevailing interest rates. The change in the value of a bond or portfolio can be approximated by multiplying its duration by a change in interest rates. For example, if a bond has an effective duration of three years, a 1% increase in general interest rates would be expected to cause the bond's value to decline about 3% while a 1% decrease in general interest rates would be expected to cause the bond's value to increase 3%. The duration of a debt security may be equal to or shorter than the full maturity of a debt security.
- **ETF Risk.** Each of the Funds is an ETF, and, as a result of an ETF's structure, the Funds are exposed to the following risks:
 - *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with a Fund. Each Fund may have a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. These events, among others, may lead to a Fund's Shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than the NAV when you buy Shares of any of the Funds in the secondary market, and you may receive less (or more) than NAV when you sell those Shares in the secondary market. A diminished market for an ETF's shares substantially increases the risk that a shareholder may pay considerably more or receive significantly less than the underlying value of the ETF shares bought or sold. In periods of market volatility, APs, market makers and/or liquidity providers may be less willing to transact in Fund Shares.
 - *Cash Transactions Risk.* Unlike certain ETFs, the Funds may effect their creations and redemptions partially or wholly for cash rather than on an in-kind basis. Because of this, each Fund may incur costs such as brokerage costs or be unable to realize certain tax benefits associated with in-kind transfers of portfolio securities that may be realized by other ETFs. These costs may decrease the Fund's NAV to the extent that the costs are not offset by a transaction fee payable by an AP. Shareholders may be subject to tax on gains they would not otherwise have been subject to and/or at an earlier date than if the Fund had effected redemptions wholly on an in-kind basis.
 - *Secondary Market Trading Risk.* Although the Funds' Shares are listed for trading on a national securities exchange (the "Exchange") and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for Shares will develop or be maintained. Trading in the Funds' Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant

to Exchange “circuit breaker” rules, which temporarily halt trading on the Exchange. Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of the Funds’ Shares may begin to mirror the liquidity of each Fund’s underlying holdings, which can be significantly less liquid than each Fund’s Shares. In addition, during periods of market stress, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

- ***Shares May Trade at Prices Other Than NAV Risk.*** As with all ETFs, Shares of the Funds may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate each Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility or periods of steep market declines. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a “bid/ask” spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Adviser believes that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
- **Fixed-Income Market Risk.** The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). During periods of reduced market liquidity, any of the Funds may not be able to readily sell fixed-income securities at prices at or near their perceived value. If a Fund needed to sell large blocks of fixed-income securities to meet shareholder redemption requests or to raise cash, those sales could further reduce the prices of such securities. An unexpected increase in a Fund’s redemption requests, including requests from shareholders who may own a significant percentage of a Fund’s Shares, which may be triggered by market turmoil or an increase in interest rates, could cause a Fund to sell its holdings at a loss or at undesirable prices and adversely affect that Fund’s share price and increase that Fund’s liquidity risk, fund expenses and/or taxable distributions. Economic and other market developments can adversely affect fixed-income securities markets. Regulations and business practices, for example, have led some financial intermediaries to curtail their capacity to engage in trading (*i.e.*, “market making”) activities for certain fixed-income securities, which could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets. Policy and legislative changes worldwide are affecting many aspects of financial regulation. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- **Fixed Income Securities Risk.** Fixed-income securities are subject to the risk of the issuer’s inability to meet principal and interest payments on its obligations (*i.e.*, credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (*i.e.*, market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper a Fund’s ability to sell the debt securities in which it invests.
- **Futures Risk.** Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by a Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.

- **High Portfolio Turnover Risk.** Each Fund may incur high portfolio turnover. The active and frequent trading of a Fund's portfolio securities may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs, which could reduce the Fund's return.
- **Illiquid Investments Risk.** A Fund may not acquire any illiquid investment if, immediately after the acquisition, such Fund would have invested more than 15% of its net assets in illiquid investments. An illiquid investment is any investment that a Fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. Liquid investments may become illiquid after purchase by a Fund, particularly during periods of market turmoil. There can be no assurance that a security or instrument that is deemed to be liquid when purchased will continue to be liquid for as long as it is held by a Fund, and any security or instrument held by a Fund may be deemed an illiquid investment pursuant to such Fund's liquidity risk management program. A Fund's illiquid investments may reduce the returns of the Fund because it may be difficult to sell the illiquid investments at an advantageous time or price. In addition, if a Fund is limited in its ability to sell illiquid investments during periods when shareholders are redeeming their shares, such Fund will need to sell liquid securities to meet redemption requests and illiquid securities will become a larger portion of such Fund's holdings. An investment may be illiquid due to, among other things, the reduced number and capacity of traditional market participants to make a market in fixed-income securities or the lack of an active trading market. To the extent that a Fund's principal investment strategies involve derivatives or securities with substantial market and/or credit risk, such Fund will tend to have the greatest exposure to the risks associated with illiquid investments. Illiquid investments may be harder to value, especially in changing markets, and if a Fund is forced to sell these investments to meet redemption requests or for other cash needs, such Fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed-income funds may be higher than normal. In addition, when there is illiquidity in the market for certain securities, a Fund, due to limitations on illiquid investments, may be subject to purchase and sale restrictions.
- **Income Risk.** The Funds' income may decline if interest rates fall. This decline in income can occur because the Fund may subsequently invest in lower yielding bonds as bonds in its portfolio mature, are near maturity or are called, or the Fund otherwise needs to purchase additional bonds.
- **Index-Related Risk.** The F/m Ultrashort TIPS Fund seeks to achieve a return that corresponds (before fees and expenses) generally to the price and yield performance, of the Fund's Underlying Index as published by the sponsor (the "Index Provider"). There is no assurance that the Index Provider or any agents that may act on its behalf will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. While the Index Provider provides descriptions of what the Underlying Index is designed to achieve, neither the Index Provider nor its agents provide any warranty or accept any liability in relation to the quality, accuracy or completeness of the Underlying Index or its related data, and they do not guarantee that the Underlying Index will be in line with the Index Provider's methodology. The Fund's strategy, as described in this Prospectus, is to manage the Fund consistently with its Underlying Index. The Fund does not provide any warranty or guarantee against the Index Provider's or any agent's errors. Errors in respect of the quality, accuracy and completeness of the data used to compile the Underlying Index may occur from time-to-time and may not be identified and corrected by the Index Provider for a period of time or at all, particularly where the Underlying Index is less commonly used as a benchmark by funds or managers. Such errors may negatively or positively impact the Fund and its shareholders. For example, during a period where the Underlying Index contains incorrect constituents, the Fund would have market exposure to such constituents and would be underexposed to the Underlying Index's other constituents. Shareholders should understand that any gains from Index Provider errors will be kept by the Fund and its shareholders and any losses or costs resulting from Index Provider errors will be borne by the Fund and its shareholders.

Unusual market conditions may cause the Index Provider to postpone a scheduled rebalance to the Underlying Index, which could cause the Underlying Index to vary from its normal or expected composition. The postponement of a scheduled rebalance in a time of market volatility could mean that constituents of the Underlying Index that would otherwise be removed at rebalance due to changes in market value, issuer credit ratings, or other reasons may remain, causing the performance and constituents of the Underlying Index to vary from those expected under normal conditions. Apart from scheduled rebalances, the Index Provider or its agents may carry out additional ad hoc rebalances to the Underlying Index due to reaching certain weighting constraints, unusual market conditions or corporate events or, for example, to correct an error in the selection of index constituents. When the Underlying Index is rebalanced and the Fund in turn rebalances its portfolio to attempt to increase the correlation between the Fund's portfolio and the Underlying Index, any transaction costs and market exposure arising from such portfolio rebalancing will be borne directly by the Fund and its shareholders. Therefore, errors and additional ad hoc rebalances carried out by the Index Provider or its agents to the Underlying Index may increase the costs to and the tracking error risk of the Fund.

- **Inflation-Indexed Bonds Risk.** With respect to the F/m Ultrashort TIPS Fund, the principal value of an investment in the Fund is not protected or otherwise guaranteed by virtue of the Fund's investments in inflation-indexed bonds. Inflation-indexed bonds are fixed-income securities whose principal value is periodically adjusted according to the rate of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced.

Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal value. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Short-term increases in inflation may lead to a decline in value. Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity.

Periodic adjustments for inflation to the principal amount of an inflation-indexed bond may give rise to original issue discount, which will be includable in the Fund's gross income. Due to original issue discount, the Fund may be required to make annual distributions to shareholders that exceed the cash received, which may cause the Fund to liquidate certain investments when it is not advantageous to do so. Also, if the principal value of an inflation-indexed bond is adjusted downward due to deflation, amounts previously distributed in the taxable year may be characterized in some circumstances as a return of capital.

- **Inflation-Linked Securities.** With respect to the F/m Ultrashort TIPS Fund, in general, the value of an inflation-linked security, including TIPS, will typically decrease when real interest rates (nominal interest rates reduced by the expected impact of inflation) increase and increase when real interest rates decrease. When inflation is negative or concerns over inflation are low, the value and income of inflation-linked securities could fall and result in losses for the Fund and during periods of very low inflation, the yield on an inflation-linked security may be negative. Conversely, during sustained periods of high inflation, the Fund's yield should increase, which may not be repeated. Funds that invest heavily in inflation-linked securities do not always move in lockstep with inflation because they do not necessarily buy inflation-linked securities when they are originally issued or hold them until maturity. In addition, the accrual of inflation adjustments on the Fund's holdings may significantly impact the current level of dividends actually paid to shareholders. Changes in inflation rates and/or interest rates may cause the Fund's yield to vary substantially over time.

- **Interest Rate Risk.** Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise. Changes in the value of a debt instrument usually will not affect the amount of income a Fund receives from it but will generally affect the value of your investment in a Fund. Changes in interest rates may also affect the liquidity of a Fund's investments in debt instruments. In general, the longer the maturity or duration of a debt instrument, the greater its sensitivity to changes in interest rates. A Fund is subject to the risk that the income generated by its investments may not keep pace with inflation. Actions by governments and central banking authorities can result in increases or decreases in interest rates, which may negatively affect the value of debt instruments held by a Fund, resulting in a negative impact on the Fund's performance and NAV. Any interest rate increases could cause the value of a Fund's investments in debt instruments to decrease. Rising interest rates may prompt redemptions from a Fund, which may force the Fund to sell investments at a time when it is not advantageous to do so, which could result in losses. During periods of very low or negative interest rates, a Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Very low or negative interest rates may magnify interest rate risk. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from a Fund's performance to the extent such Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for portfolio securities have increased, a Fund may have a very low or even negative yield. A low or negative yield would cause a Fund to lose money in certain conditions and over certain time periods. An increase in interest rates will generally cause the value of securities held by a Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments, including those held by a Fund. Additionally, as a result of increasing interest rates, reserves held by banks and other financial institutions in bonds and other debt securities could face a significant decline in value relative to deposits and liabilities, which coupled with general economic headwinds resulting from a changing interest rate environment, creates liquidity pressures at such institutions. As a result, certain sectors of the credit markets could experience significant declines in liquidity, and it is possible that a Fund will not be able to manage this risk effectively.

- **Issuer Risk.** The performance of the Fund depends on the performance of individual securities or other assets to which the Fund has exposure. The value of securities or other assets may decline, or perform different from the market as a whole, due to changes in the financial condition or credit rating of the issuer or counterparty.
- **Leverage Risk.** Borrowing transactions, reverse repurchase agreements, certain derivatives transactions, securities lending transactions and other investment transactions such as when-issued, delayed-delivery, or forward commitment transactions may create investment leverage. If a Fund engages in transactions that have a leveraging effect on the Fund's investment portfolio, the value of the Fund will be potentially more volatile and all other risks will tend to be compounded. This is because leverage generally creates investment risk with respect to a larger base of assets than a Fund would otherwise have and so magnifies the effect of any increase or decrease in the value of the Fund's underlying assets. The use of leverage is considered to be a speculative investment practice and may result in losses to a Fund. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. The use of leverage may cause a Fund to liquidate positions when it may not be advantageous to do so to satisfy repayment, interest payment, or margin obligations or to meet asset coverage requirements.
- **Liquidity Risk.** Certain securities held by the Funds may be difficult (or impossible) to sell at the time and at the price the Adviser would like. As a result, each such Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that the Funds may lose money or be prevented from realizing capital gains if it cannot sell a security at a particular time and price.
- **Management Risk.** With respect to the F/m Ultrashort TIPS Fund, the Adviser will use a representative sampling indexing strategy, so the Fund may not fully replicate its Underlying Index and may hold securities that are not included in its Underlying Index. As a result, the Fund is subject to the risk that the Adviser's investment strategy, the implementation of which is subject to a number of constraints, may not produce the intended results. The Adviser's use of a representative sampling indexing strategy may subject the Fund to an increased risk of tracking error, in that the securities selected in aggregate for the Fund's portfolio may not have investment profiles similar to those of the Underlying Index. Each Fund described in this Prospectus is subject to management risk, regardless of whether it is an actively or passively managed portfolio. In managing a Fund's investment portfolio, the Adviser will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that a Fund will meet its investment objectives.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors including economic, political, financial, public health crises (such as epidemics or pandemics) or other disruptive events (whether real, expected or perceived) in the U.S. and global markets. The Funds' NAVs and market prices are based upon the market's perception of value and are not necessarily an objective measure of an investment's value. There is no assurance that any of the Funds will realize its investment objective, and an investment in any of the Funds is not, by itself, a complete or balanced investment program. You could lose money on your investment in any of the Funds, or any of the Funds could underperform other investments.

Periods of unusually high financial market volatility and restrictive credit conditions, at times limited to a particular sector or geographic area, have occurred in the past and may be expected to recur in the future. Some countries, including the United States, have adopted or have signaled protectionist trade measures, relaxation of the financial industry regulations that followed the financial crisis, and/or reductions to corporate taxes. The current presidential administration has called for and is seeking to quickly enact significant changes to U.S. fiscal, tax, trade, healthcare, immigration, foreign, and government regulatory policy. Significant uncertainty exists with respect to legislation, regulation and government policy at the federal level, as well as the state and local levels. Recent events have created a climate of heightened uncertainty and introduced new and difficult-to-quantify macroeconomic and political risks with potentially far-reaching implications. There has been a corresponding meaningful increase in the uncertainty surrounding interest rates, inflation, foreign exchange rates, trade volumes and fiscal and monetary policy. To the extent the U.S. Congress or the current presidential administration implements changes to U.S. policy, those changes may impact, among other things, the U.S. and global economy, international trade and relations, unemployment, immigration, corporate taxes, healthcare, the U.S. regulatory environment, inflation and other areas. Although the Funds cannot predict the impact, if any, of these changes to the Funds' respective businesses, they could adversely affect the Funds' business, financial condition, operating results and cash flows. Until the Funds know what policy changes are made and how those changes impact the Funds' business and the business of the Funds' competitors over the long term, the Funds will not know if, overall, the Funds will benefit from them or be negatively affected by them.

- **Market Price Risk.** Fund Shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for Shares. As a result, the trading prices of shares may deviate significantly from the NAV during

periods of market volatility. The Adviser cannot predict whether Shares will trade above, below, or at their NAV. Given the fact that Shares can be created and redeemed in Creation Units (defined below), the Adviser believes that large discounts or premiums to the NAV of Shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in Fund Shares, Shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that Shares normally will trade close to the value of a Fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of such Fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of Fund Shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by a Fund may be traded in markets that close at a different time than the exchange on which such Fund's Shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to a Shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in a Fund's NAV. A Fund's investment results are measured based upon the daily NAV of the particular Fund. Investors purchasing and selling a Fund's Shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with such Fund.

- **Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund's creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.
- **New Fund Risk.** The Funds are newly organized, diversified management investment companies with a limited operating history. As a result, prospective investors have a limited track record on which to base their investment decision. In addition, there can be no assurance that a Fund will grow to, or maintain, an economically viable size, in which case the Board of Directors (the "Board") of The RBB Fund, Inc. may determine to liquidate any or all of the Funds. Like other new funds, large inflows and outflows may impact any of the Funds' market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. If any of the Funds fails to attract a large amount of assets, shareholders of the Fund may incur higher expenses as the Fund's fixed costs would be allocated over a smaller number of shareholders.
- **Operational Risk.** Each Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties, or other third parties, failed or inadequate processes or technology or systems failures. Each Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.
- **Over the Counter Market Risk.** Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by a Fund in over-the-counter transactions may include an undisclosed dealer markup. A Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.
- **Passive Investment Risk.** The F/m Ultrashort TIPS Fund is not actively managed and the Adviser will not sell shares of a security due to current or projected underperformance of a security, industry, or sector. The F/m Ultrashort TIPS Fund generally does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Funds.
- **Rate-Linked Derivatives Risk.** A Fund's exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile. The value of such investments

may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. A Fund is expected to benefit from the options it holds if long-term U.S. interest rates rise during the time period in which the Fund holds the options. However, if long-term U.S. interest rates decrease, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Adviser. An increase in interest rates may cause the value of securities held directly or indirectly by a Fund to decline to the extent that such Fund's hedging strategy is not effectively implemented. Even if a Fund is hedged against losses due to long-term interest rate increases linked to U.S. interest rates, outright interest rate increases may also lead to heightened volatility in the fixed-income markets and may positively affect the value of a Fund's options while negatively impacting such Fund's investments in U.S. Treasuries. A Fund could lose money on the options held by such Fund, and the present value of such Fund's portfolio investments could decrease if inflation increases. These interest rate-linked options may also cause a Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the U.S. interest rate curve or the price of the options owned by a Fund could materially adversely affect an investment in the Fund. A Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than interest rate risk. Moreover, to the extent that interest rate risk has been priced into the government bonds owned directly or indirectly by a Fund, such Fund could underperform other investments even during periods of rising long-term U.S. interest rates. There is no guarantee that a Fund will have positive performance even in environments of sharply rising U.S. interest rates. There is no guarantee that a Fund will be able to successfully mitigate interest rate risk.

- **Rating Agencies Risk.** Ratings are not an absolute standard of quality, but rather general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely if, in the judgment of the agency establishing the rating, circumstances so warrant. A downward revision or withdrawal of such ratings, or either of them, may have an effect on the liquidity or market price of the securities in which the Funds or Underlying Funds invest.
- **Reinvestment Risk.** Reinvestment risk is the risk that income from the Funds' portfolios will decline if and when the Fund reinvests the proceeds from the disposition of portfolio securities at market interest rates that are below the portfolio's current earnings rate. A decline in income could negatively affect the market price of a Fund's Shares.
- **Reverse Repurchase Agreements Risk.** Reverse repurchase agreements involve the sale of securities held by a Fund subject to an agreement to repurchase them at a mutually agreed upon date and price (including interest). A Fund may enter these transactions when the Adviser expects the return to be earned from the investment of the transaction proceeds to be greater than the interest expense of the transaction. Reverse repurchase agreements may also be entered into as a temporary measure for emergency purposes or to meet redemption requests.

Reverse repurchase agreements are a form of secured borrowing and subject a Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested, resulting in an increase in the speculative character of the Fund's outstanding shares. If the securities held by a Fund decline in value while these transactions are outstanding, the NAV of a Fund's outstanding shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by a Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by a Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.

When a Fund enters into a reverse repurchase agreement, it is subject to the risk that the buyer under the agreement may file for bankruptcy, become insolvent or otherwise default on its obligations to the Fund. In the event of a default by the counterparty, there may be delays, costs and risks of loss involved in a Fund's exercising its rights under the agreement, or those rights may be limited by other contractual agreements or obligations or by applicable law. Such an insolvency may result in a loss equal to the amount by which the value of the securities or other assets sold by the Fund exceeds the repurchase price payable by the Fund; if the value of the purchased securities or other assets increases during such a delay, that loss may also be increased. A Fund could lose money if it is unable to recover the securities or if the value of investments made by the Fund using the proceeds of the transaction is less than the value of securities. When a Fund enters into a reverse repurchase agreement, it must identify on its books cash or liquid assets that have a value equal to or greater than the repurchase price.

- **Risk of Investing in the United States.** A decrease in imports or exports, changes in trade regulations, inflation and/or an economic recession in the U.S. may have a material adverse effect on the U.S. economy and the securities listed on U.S. exchanges. Proposed and adopted policy and legislative changes in the U.S. are changing many aspects of financial, commercial, public health, environmental, and other regulation and may have a significant effect on U.S. markets generally, as well as on the value of certain securities. Governmental agencies project that the U.S. will continue to maintain elevated public debt levels for the foreseeable future. Although elevated debt levels do not necessarily indicate or cause economic problems, elevated public debt service costs may constrain future economic growth. Circumstances could arise that could prevent the timely payment of interest or principal on U.S. government debt, such as reaching the legislative “debt ceiling.” Such non-payment would result in substantial negative consequences for the U.S. economy and the global financial system.

If U.S. relations with certain countries deteriorate, it could adversely affect U.S. issuers, as well as non-U.S. issuers that rely on the U.S. for trade. The U.S. has also experienced increased internal unrest and discord. If these trends were to continue, it may have an adverse impact on the U.S. economy and the issuers in which any of the Funds invest.

- **Securities Lending Risk.** Each Fund may seek to increase its income by lending portfolio securities to institutions, such as certain broker-dealers. Portfolio securities loans are secured continuously by collateral maintained on a current basis at an amount at least equal to the market value of the securities loaned. The value of the securities loaned by a Fund will not exceed 33 1/3% of the value of the Fund’s total assets. A Fund may experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund. Lending a Fund’s portfolio securities involves the risk of delay in receiving additional collateral if the value of the securities goes up while they are on loan. A Fund may lose money from securities lending if, for example, it is delayed in or prevented from selling the collateral or from recovering the securities loaned or if it incurs losses on the reinvestment of cash collateral.
- **Shorting U.S. Treasury Securities Risk.** With the exception of the F/m Ultrashort TIPS Fund, the Funds may seek inverse or “short” exposure through financial instruments such as U.S. Treasury securities, which would cause the Funds to be exposed to certain risks associated with selling short. Changes in interest rates or market conditions can cause the price of U.S. Treasury securities to move against the Funds’ position, potentially resulting in substantial losses. Short positions often involve leverage, which can magnify both gains and losses. Small adverse movements in Treasury security prices may result in larger losses than the initial capital invested. Unlike long positions, losses on short positions can theoretically be unlimited if the price of the Treasury security continues to rise. During periods of market stress or reduced liquidity, it may be challenging to cover short positions, leading to forced covering at unfavorable prices. U.S. Treasury prices are highly sensitive to changes in interest rates. A decrease in yields (increase in prices) could result in significant losses for short positions. Shorting typically requires borrowing securities, which involves reliance on the availability of lenders and custodians. The failure of a counterparty to deliver the securities may impact a Fund’s ability to execute its investment strategy. Borrowing U.S. Treasury securities for shorting purposes incurs costs that can erode returns. These costs may increase during periods of high demand or limited supply. Changes in government policies or regulatory frameworks governing short sales of U.S. Treasury securities could adversely impact the ability to execute or maintain short positions. Short positions are subject to margin requirements. If the market moves against the position, a Fund may need to deposit additional collateral to meet margin calls, potentially at an inconvenient time.
- **Swaps Risk.** Swap agreements, including total return swaps that may be referred to as contracts for difference, are two-party contracts entered into for periods ranging from a few days to more than one year. In a standard “swap” transaction, two parties agree to exchange the value(s) or cash flow(s) of one asset for another over a certain period of time. Swap agreements involve the risk that the party with whom a Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements may also involve the risk that there is an imperfect correlation between the return on a Fund’s obligation to its counterparty and the return on the referenced asset. In addition, swap agreements are subject to market and illiquidity risk, leverage risk and hedging risk.
- **Tracking Error Risk.** The F/m Ultrashort TIPS Fund may be subject to tracking error, which is the divergence of a Fund’s performance from that of its Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in a Fund’s portfolio and those included in the corresponding Underlying Index, pricing differences, transaction costs incurred by the Fund, the Fund’s holding of uninvested cash, differences in timing of the accrual of or the valuation of distributions, the requirements to maintain pass-through tax treatment, portfolio transactions carried out to minimize the distribution of capital gains to shareholders, acceptance of custom baskets, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because a Fund incurs fees and expenses, while its Underlying Index does not.

- **Trading Halt Risk.** An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in a Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.
- **Underlying Funds Risk.** Investing in Underlying Funds may result in duplication of expenses, including advisory fees, in addition to a Fund's own expenses. The risk of owning an Underlying Fund generally reflects the risks of owning the underlying investments the Underlying Fund holds. Each Fund may incur brokerage fees in connection with its purchase of ETF shares. When a Fund invests in an Underlying Fund, the Fund will be subject to substantially the same risks as those associated with the direct ownership of securities comprising the Underlying Fund or index on which the ETF is based and the value of the Fund's investments will fluctuate in response to the performance and risks of the underlying investments or index. In addition to the brokerage costs associated with the Underlying Fund's purchase and sale of the underlying securities, ETFs incur fees that are separate from those of a Fund. As a result, a Fund's shareholders will indirectly bear a proportionate share of the operating expenses of the ETFs, in addition to Fund expenses. The 1940 Act and the related rules and regulations adopted thereunder impose conditions on investment companies that invest in other investment companies. Section 12(d)(1)(A) of the 1940 Act prohibits a fund from (i) acquiring more than 3% of the voting shares of any one investment company, (ii) investing more than 5% of its total assets in any one investment company, and (iii) investing more than 10% of its total assets in all investment companies combined. Rule 12d1-4 under the 1940 Act permits registered investment companies to acquire securities of another investment company in excess of these amounts subject to certain conditions, including limits on control and voting of acquired funds' shares, evaluations and findings by investment advisers, fund investment agreements, and limits on most three-tier fund structures.
- **U.S. Treasury Obligations Risk.** While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, such securities are nonetheless subject to credit risk (*i.e.*, the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's U.S. Treasury obligations to decline.
- **Valuation Risk.** The prices provided by the Funds' pricing services or independent dealers or the fair value determinations made by the valuation committee of the Adviser may be different from the prices used by other funds or from the prices at which securities are actually bought and sold. The prices of certain securities provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.

Additional Information About Non-Principal Risks of the Funds. This section provides additional information regarding certain non-principal risks of investing in the Funds. The risks listed below could have a negative impact on any of the Funds' performance and trading prices.

- **Costs of Buying or Selling Shares Risk.** Investors buying or selling Shares of a Fund in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of the Funds' Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy a Fund's Shares (the "bid" price) and the price at which an investor is willing to sell a Fund's Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for a Fund's Shares based on trading volume and market liquidity, and is generally lower if a Fund's Shares have more trading volume and market liquidity and higher if a Fund's Shares have little trading volume and market liquidity. Further, a relatively small investor base in a Fund, asset swings in a Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling a Fund's Shares, including bid/ask spreads, frequent trading of a Fund's Shares may significantly reduce investment results and an investment in a Fund's Shares may not be advisable for investors who anticipate regularly making small investments.
- **Large Shareholder and Large-Scale Redemption Risk.** Certain shareholders, including an Authorized Participant, a third-party investor, the Funds' Adviser or an affiliate of the Funds' Adviser, a market maker, or another entity, may from time to time own or manage a substantial amount of Fund Shares or may invest in any of the Funds and hold their investment for a limited period of time. These shareholders may also pledge or loan Fund Shares (to secure financing or otherwise), which may result in the Shares becoming concentrated in another party. There can be no assurance that any large shareholder

or large group of shareholders would not redeem their investment or that the size of any of the Funds would be maintained. Redemptions of a large number of Fund Shares by these shareholders may adversely affect a Fund's liquidity and net assets. To the extent a Fund permits redemptions in cash, these redemptions may force the Fund to sell portfolio securities when it might not otherwise do so, which may negatively impact the Fund's NAV, have a material effect on the market price of the Shares and increase the Fund's brokerage costs and/or accelerate the realization of taxable income and/or gains and cause the Fund to make taxable distributions to its shareholders earlier than the Fund otherwise would have. In addition, under certain circumstances, non-redeeming shareholders may be treated as receiving a disproportionately large taxable distribution during or with respect to such tax year. The Fund also may be required to sell its more liquid Fund investments to meet a large redemption, in which case the Fund's remaining assets may be less liquid, more volatile, and more difficult to price. To the extent these large shareholders transact in shares on the secondary market, such transactions may account for a large percentage of the trading volume for the Shares of a Fund and may, therefore, have a material upward or downward effect on the market price of the Fund Shares. In addition, large purchases of Fund Shares may adversely affect a Fund's performance to the extent that a Fund is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would, diluting its investment returns.

- **Legal and Regulatory Change Risk.** The regulatory environment for investment companies is evolving, and changes in regulation may adversely affect the value of any of the Funds' investments and each Fund's ability to pursue its trading strategy. In addition, the securities markets are subject to comprehensive statutes and regulations. The SEC and other regulators and self-regulatory organizations and exchanges are authorized to take extraordinary actions in the event of market emergencies. The effect of any future regulatory change on the Funds could be substantial and adverse.
- **RIC Compliance Risk.** Each of the Funds has elected to be, and intends to qualify each year for treatment as, a RIC under Subchapter M of Subtitle A, Chapter 1, of the Code. To continue to qualify for federal income tax treatment as a RIC, a Fund must meet certain source-of-income, asset diversification and annual distribution requirements. If for any taxable year a Fund fails to qualify for the special federal income tax treatment afforded to RICs, all of that Fund's taxable income will be subject to federal income tax at regular corporate rates (without any deduction for distributions to its shareholders) and its income available for distribution will be reduced. Under certain circumstances, a Fund could cure a failure to qualify as a RIC, but in order to do so, that Fund could incur significant Fund-level taxes and could be forced to dispose of certain assets.
- **Temporary Investments.** Each of the Funds may depart from its principal investment strategy in response to adverse market, economic, political or other conditions by taking a temporary defensive position (up to 100% of its assets) in all types of money market and short-term debt securities. If a Fund were to take a temporary defensive position, it may be unable for a time to achieve its investment objective.

Disclosure of Portfolio Holdings

The Funds' entire portfolio holdings are publicly disseminated each day the Funds are open for business through the Funds' website at www.fminvest.com. The Funds' portfolio holdings also may be made available through financial reporting and news services or any other medium, including publicly available internet web sites. Additional information regarding the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio securities is available in the Funds' Statement of Additional Information ("SAI").

MANAGEMENT OF THE FUNDS

The Board of Directors (the "Board") of The RBB Fund, Inc. (the "Company"), of which the Funds are each a series, is responsible for supervising the operations and affairs of the Funds. The Adviser is responsible for the daily management and administration of the Funds' operations.

Investment Adviser

The investment adviser for each Fund is F/m Investments LLC (the "Adviser"). The Adviser is located at 3050 K Street NW, Suite 201, Washington, DC 20007. Three officers of the Company own an indirect, minority interest in the Adviser. The Adviser is a majority owned subsidiary of F/m Managers Group, LP ("FMG"), which is a wholly owned subsidiary of 1251 Capital, which is a financial services holding company. Subject to the overall supervision of the Board, the Adviser manages the overall investment operations of each Fund in accordance with the Fund's investment objective and policies and formulates a continuing investment strategy for the Fund pursuant to the terms of investment advisory agreement between the Company and the Adviser (the "Advisory Agreement"). Under the terms of the Advisory Agreement, each Fund pays the Adviser a unitary management fee that is computed and paid monthly at an annual rate of 0.17%-0.50% (please see chart below) of each Fund's average daily net assets during the

month. From the unitary management fee, the Adviser pays most of the expenses of the Funds, including the cost of transfer agency, custody, fund administration, legal, audit and other services. However, under the Advisory Agreement, the Adviser is not responsible for interest expenses, brokerage commissions and other trading expenses, taxes and other extraordinary costs such as litigation and other expenses not incurred in the ordinary course of business.

The Adviser will receive an advisory fee from each Fund at an annual rate of each Fund's average daily net assets as indicated in the following table:

	Contractual Advisory Fee
F/m Ultrashort Treasury Inflation-Protected (TIPS) ETF	0.17%
F/m Yield Curve Steepening Strategy ETF	0.50%
F/m Yield Curve Flattening Strategy ETF	0.50%
F/m Rising Interest Rates Strategy ETF	0.50%
F/m Falling Interest Rates Strategy ETF	0.50%

A discussion regarding the Board's approval of each Fund's respective Advisory Agreement and the factors the Board considered with respect to its approval will be available in the Fund's first annual or semi-annual report to shareholders, as applicable.

The Adviser's Investment Management Team

Peter Baden, Alexander Morris, and Marcin Zdunek serve as each Fund's portfolio managers and are jointly responsible for the portfolio management decisions for the Funds.

Peter Baden

Peter Baden is the Managing Director and Director of Fixed Income Strategy for the Adviser. Mr. Baden has over 25 years of investment management experience, encompassing portfolio management, mergers and acquisitions, financial institutions, and credit analysis. Prior to joining the Adviser in 2020, Mr. Baden joined a predecessor firm in 2005 to launch the firm's effort to build customized fixed income portfolios for high net-worth clients. Prior to joining the predecessor firm, Mr. Baden worked on the mergers and acquisitions team at Star Banc (now US Bancorp) acquiring and integrating multiple banks and savings and loan associations. In the trust department of Star Banc, he managed the REIT allocation for a mutual fund and analyzed US and international bank, insurance, and financial companies, as well as municipalities. Previously, at Pacholder Associates, Mr. Baden managed money market assets in multiple portfolios, and designed and developed proprietary portfolio systems and models for distressed companies, collateralized bond obligations, and legal settlement pools. Mr. Baden has extensive experience with resolution and liquidation for distressed portfolios including experience with the Resolution Trust Corporation.

Alexander Morris

Alexander Morris is the Chief Executive Officer of the Adviser. Mr. Morris has over 15 years of investment management experience, encompassing portfolio management, trading, mergers and acquisitions, financial institutions, and security analysis, and has served in a number of senior management roles for various financial institutions. He founded the Adviser in 2019 and has served as its President and Chief Investment Officer since its inception. Prior to founding the Adviser, Mr. Morris founded Rowhouse Capital Partners LLC, a boutique strategic advisory firm to financial institutions and previously served as in various capital markets and corporate development roles with Fortigent LLC ("Fortigent"), a family office services provider and asset manager, as well as with LPL Financial which acquired Fortigent in 2012. Prior to Fortigent, Mr. Morris served in various analysis roles for financial institutions.

Marcin Zdunek

Mr. Zdunek is the Managing Director, Head of Capital Markets & Portfolio Manager for the Adviser. He joined the Adviser in November 2020 when his prior firm, First Western Capital Management ("First Western"), was acquired. Prior to joining First Western in 2007, Mr. Zdunek was a Supervisor in Fixed Income and Equity Trading at AIG Global Investment Group. Mr. Zdunek's prior positions included Senior Fixed Income Trade Support Specialist at Alliance Capital Management and a Fixed Income Associate/Supervisor at Morgan Stanley.

The SAI provides additional information about the compensation of each Portfolio Manager, other accounts managed by them, and their ownership of Shares of the Funds.

HOW TO BUY AND SELL SHARES

Each of the Funds issue and redeem its Shares at NAV only in Creation Units. Only APs may acquire Shares directly from each Fund, and only APs may tender their Shares for redemption directly to each Fund, at NAV. APs must be (i) a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the National Securities Clearing Corporation, a clearing agency that is registered with the SEC; or (ii) a DTC participant (as discussed below). In addition, each AP must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Transfer Agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Investors can only buy and sell Shares in secondary market transactions through brokers. Shares are listed for trading on the secondary market on a national securities exchange (the “Exchange”) and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling a Fund’s Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning a Fund’s Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Funds’ Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of a Fund’s Shares, you are not entitled to receive physical delivery of stock certificates or to have a Fund’s Shares registered in your name, and you are not considered a registered owner of a Fund’s Shares. Therefore, to exercise any right as an owner of a Fund’s Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” through your brokerage account.

Share Trading Prices on the Exchange

Trading prices of the Funds’ Shares on the Exchange may differ from the Fund’s daily NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares. To provide additional information regarding the indicative value of each Fund’s Shares, the Exchange or a market data vendor disseminates information every 15 seconds through the facilities of the Consolidated Tape Association, or other widely disseminated means, including an updated “intraday indicative value” (“IIV”) for each Fund’s Shares as calculated by an information provider or market data vendor. The Funds are neither involved in nor responsible for any aspect of the calculation or dissemination of the IIVs and make no representation or warranty as to the accuracy of the IIVs. If the calculation of the IIV is based on the basket of Deposit Securities, such IIV may not represent the best possible valuation of the Funds’ portfolios because the basket of Deposit Securities does not necessarily reflect the precise composition of the current portfolio of any Fund at a particular point in time. The IIV should not be viewed as a “real-time” update of each Fund’s NAV because the IIV may not be calculated in the same manner as the NAV, which is computed only once a day, typically at the end of the business day. The IIV is generally determined by using both current market quotations and/or price quotations obtained from broker-dealers that may trade in the Deposit Securities.

Frequent Purchases and Redemptions of Shares

The Funds impose no restrictions on the frequency of purchases and redemptions of the Funds’ Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by any of the Funds’ shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem any Fund’s Shares directly with a Fund, are an essential part of the ETF process and help keep share trading prices in line with NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains or losses. To minimize these potential consequences of frequent purchases and redemptions, the Funds employ fair value pricing and impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by any of the Funds in effecting trades. In addition, the Funds reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the NYSE, generally at 4:00 p.m. Eastern Time, each day the NYSE is open for business. The NAV for each Fund is calculated by dividing that Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates by the Funds' Valuation Designee (defined below), under guidelines established by the Board.

Fair Value Pricing

The Board has adopted a pricing and valuation policy for use by each Fund and its Valuation Designee in calculating the Fund's NAV. Pursuant to Rule 2a-5 under the 1940 Act, each Fund has designated the Adviser as its "Valuation Designee" to perform all of the fair value determinations as well as to perform all of the responsibilities that may be performed by the Valuation Designee in accordance with Rule 2a-5. The Valuation Designee is authorized to make all necessary determinations of the fair values of portfolio securities and other assets for which market quotations are not readily available or if it is deemed that the prices obtained from brokers and dealers or independent pricing services are unreliable. Relying on prices supplied by pricing services or dealers or using fair valuation involves the risk that the values used by a Fund to price its investments may be higher or lower than the values used by other investment companies and investors to price the same investments.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

Each Fund will distribute substantially all of its net investment income and net realized capital gains, if any, to its shareholders. Each Fund expects to declare and pay distributions, if any, monthly, however it may declare and pay distributions more or less frequently. Net realized capital gains (including net short-term capital gains), if any, will be distributed by each Fund at least annually.

Dividend Reinvestment Service

Brokers may make the DTC book-entry dividend reinvestment service available to their customers who own a Fund's Shares. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole Shares of that Fund purchased on the secondary market. Without this service, investors would receive their distributions in cash. In order to achieve the maximum total return on their investments, investors are encouraged to use the dividend reinvestment service. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker. Brokers may require a Fund's shareholders to adhere to specific procedures and timetables.

For taxable investors, distributions of a Fund's taxable income or gain are taxable whether reinvested in Shares or received in cash.

Taxes

Each Fund intends to elect to be, and intends to qualify each year for treatment as, a RIC under Subchapter M of Subtitle A, Chapter 1, of the Code.

As with any investment, you should consider how your investment in Shares of a Fund will be taxed. The tax information in this Prospectus is provided as general information about certain U.S. tax considerations relevant under current law, which may be subject to change in the future. Such tax information does not represent a detailed description of the U.S. federal income tax consequences to you in light of your particular circumstances, including if you are subject to special tax treatment. Except where otherwise indicated, the discussion relates to investors who are "United States persons" (within the meaning of the Code) holding Shares as capital assets for U.S. federal income tax purposes (generally, for investment). You should consult your own tax professional about the tax consequences of an investment in a Fund's Shares.

Unless your investment in a Fund's Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when: (i) a Fund makes distributions; (ii) you sell your Shares listed on the Exchange; and (iii) you purchase or redeem Creation Units.

Taxes on Distributions

Each Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains income. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income (as discussed below). Taxes on distributions of capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares of a Fund. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by a Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by that Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares of a Fund.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met by both such Fund and the shareholder. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. The amount of a Fund's distributions that qualify for this favorable treatment may be reduced as a result of such Fund's securities lending activities, if any. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, provided holding period and other requirements are met by both such Fund and the shareholder. The amount of the dividends qualifying for this deduction may, however, be reduced as a result of a Fund's securities lending activities, if any.

If a Fund were to retain any net capital gain, such Fund may designate the retained amount as undistributed capital gains in a notice to shareholders who, if subject to U.S. federal income tax on long-term capital gains, (i) will be required to include in income as long-term capital gain, their proportionate share of such undistributed amount, and (ii) will be entitled to credit their proportionate share of the U.S. federal income tax paid by such Fund on the undistributed amount against their U.S. federal income tax liabilities, if any, and to claim refunds to the extent the credit exceeds such liabilities. If such an event occurs, the tax basis of Shares owned by a shareholder of a Fund will, for U.S. federal income tax purposes, generally be increased by the difference between the amount of undistributed net capital gain included in the shareholder's gross income and the tax deemed paid by the shareholder.

A Fund may make distributions that are treated as a return of capital. Such distributions are generally not taxable but will reduce the basis of your Shares. To the extent that the amount of any such distribution exceeds the basis of your Shares, however, the excess will be treated as gain from a sale of the Shares.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from the Funds.

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% Medicare contribution tax on all or a portion of their "net investment income," which includes interest, dividends, and certain capital gains (including capital gains distributions and capital gains realized on the sale of Shares of the Fund). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares of a Fund). Income from U.S. treasury securities are generally exempt from state and local taxes. Distributions paid from any interest income and from any short-term or long-term capital gains will be taxable whether you reinvest those distributions or receive them in cash. Distributions paid from a Fund's net long-term capital gains, if any, are taxable to you as long-term capital gains, regardless of how long you have held your Shares.

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable to you even though it may economically represent a return of a portion of your investment. This adverse tax result is known as "buying into a dividend."

Taxes When Shares are Sold

For federal income tax purposes, any gain or loss realized upon a sale of Shares of a Fund generally is treated as a capital gain or loss and as a long-term capital gain or loss if those Shares have been held for more than 12 months and as a short-term capital gain or loss if those Shares have been held for 12 months or less. However, any capital loss on a sale of Shares held for six months or

less is treated as long-term capital loss to the extent of Capital Gain Dividends paid or undistributed capital gains deemed paid with respect to such Shares of a Fund. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired (or the shareholder enters into a contract or option to acquire Shares of a Fund), including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of Shares. If disallowed, the loss will be reflected in an increase to the basis of the Shares acquired.

IRAs and Other Tax-Qualified Plans

The one major exception to the preceding tax principles is that distributions on and sales of Shares of a Fund held in an IRA (or other tax-qualified plan) will not be currently taxable unless it borrowed to acquire the Shares.

U.S. Tax Treatment of Foreign Shareholders

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends or returns of capital) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. For these purposes, interest-related dividends and short-term capital gain dividends generally represent distributions of interest or short-term capital gains that would not have been subject to U.S. federal withholding tax at the source if received directly by a foreign shareholder, and that satisfy certain other requirements.

Properly reported distributions by a Fund that are received by foreign shareholders are generally exempt from U.S. federal withholding tax when they (a) are paid by a Fund in respect of such Fund’s “qualified net interest income” (i.e., such Fund’s U.S. source interest income, subject to certain exceptions, reduced by expenses that are allocable to such income), or (b) are paid by a Fund in connection with such Fund’s “qualified short-term gains” (generally, the excess of such Fund’s net short-term capital gains over such Fund’s long-term capital losses for such tax year). However, depending on the circumstances, a Fund may report all, some or none of such Fund’s potentially eligible distributions as derived from such qualified net interest income or from such qualified short-term gains, and a portion of such distributions (e.g., distributions attributable to interest from non-U.S. sources or any foreign currency gains) would be ineligible for this potential exemption from withholding.

If a Fund were to retain any net capital gain and designate the retained amount as undistributed capital gains in a notice to shareholders, foreign shareholders would be required to file a U.S. federal income tax return in order to claim refunds of their portion of the tax paid by such Fund on deemed capital gain distributions.

Foreign shareholders will generally not be subject to U.S. tax on gains realized on the sale of Funds’ Shares, except that a nonresident alien individual who is present in the United States for 183 days or more in a calendar year will be taxable on such gains and on capital gain dividends from the Fund.

However, if a foreign investor conducts a trade or business in the United States and the investment in a Fund is effectively connected with that trade or business, then the foreign investor’s income from that Fund will generally be subject to U.S. federal income tax at graduated rates in a manner similar to the income of a U.S. citizen or resident.

The Funds are generally required to withhold 30% on certain payments to shareholders that are foreign entities and that fail to meet prescribed information reporting or certification requirements.

The tax consequences to a foreign shareholder entitled to claim the benefits of an applicable tax treaty may differ from those described herein. All foreign investors should consult their own tax advisors regarding the tax consequences in their country of residence of an investment in any of the Funds.

Backup Withholding

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares of a Fund) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such backup withholding. A foreign investor can generally avoid such backup withholding by certifying his or her foreign status under penalties of perjury. The current backup withholding rate is 24%.

Taxes on Purchases and Redemptions of Creation Units

An AP who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the AP's aggregate basis in the securities surrendered plus the amount of cash paid for such Creation Units. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Any gain or loss realized by an AP upon a creation of Creation Units will be treated as capital gain or loss if the AP holds the securities exchanged therefor as capital assets, and otherwise will be ordinary income or loss. Any capital gain or loss realized upon the creation of Creation Units will generally be treated as long-term capital gain or loss if the securities exchanged for such Creation Units have been held by the AP for more than 12 months, and otherwise will be short-term capital gain or loss.

The Company on behalf of the Funds has the right to reject an order for a purchase of Creation Units if the AP (or a group of APs) would, upon obtaining the Creation Units so ordered, own 80% or more of the outstanding Shares of any of the Funds and if, pursuant to Section 351 of the Code, any of the Funds would have a basis in the securities different from the market value of such securities on the date of deposit. The Company also has the right to require information necessary to determine beneficial Share ownership for purposes of the 80% determination. If a Fund does issue Creation Units to an AP (or group of APs) that would, upon obtaining the Creation Units so ordered, own 80% or more of the outstanding Shares of a Fund, the AP (or group of APs) may not recognize gain or loss upon the exchange of securities for Creation Units.

An AP who redeems Creation Units will generally recognize a gain or loss equal to the difference between the sum of the aggregate market value of any securities received plus the amount of any cash received for such Creation Units and the AP's basis in the Creation Units. Any gain or loss realized by an AP upon a redemption of Creation Units will be treated as capital gain or loss if the AP holds the Shares comprising the Creation Units as capital assets, and otherwise will be ordinary income or loss. Any capital gain or loss realized upon the redemption of Creation Units will generally be treated as long-term capital gain or loss if the Shares comprising the Creation Units have been held by the AP for more than 12 months, and otherwise will generally be short-term capital gain or loss. Any capital loss realized upon a redemption of Creation Units held for six months or less will be treated as a long-term capital loss to the extent of any amounts treated as distributions to the applicable AP of long-term capital gains with respect to the Creation Units (including any amounts credited to the AP as undistributed capital gains). However, any loss realized upon a redemption of Creation Units will be disallowed to the extent Shares of a Fund are acquired (or the AP enters into a contract or option to acquire Shares of a Fund), including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the redemption. If disallowed, the loss will be reflected in an increase to the basis of the Shares acquired

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind, which would generally not give rise to a taxable gain or loss for the Fund. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

Persons purchasing or redeeming Creation Units should consult their own tax advisors with respect to the tax treatment of any creation or redemption transaction.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to state and local tax on a Fund's distributions and sales of Shares of a Fund. Consult your personal tax advisor about the potential tax consequences of an investment in Shares of the Funds under all applicable tax laws. For more information, please see the section entitled "DIVIDENDS, DISTRIBUTIONS, AND TAXES" in the SAI.

DISTRIBUTION

The Distributor, Quasar Distributors, LLC, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund. The Distributor's principal address is 190 Middle Street, Suite 301, Portland, Maine 04101.

ADDITIONAL CONSIDERATIONS

Payments to Financial Intermediaries

The Adviser and its affiliates, out of their own resources and without additional cost to the Funds or their shareholders, may pay intermediaries, including affiliates of the Adviser, for the sale of Funds' Shares and related services, including participation in activities that are designed to make intermediaries more knowledgeable about exchange traded products. Payments are generally made to intermediaries that provide shareholder servicing, marketing and related sales support, educational training or support, or access to sales meetings, sales representatives and management representatives of the intermediary. Payments may also be made to intermediaries for making Shares of the Funds available to their customers generally and in investment programs. The Adviser and its affiliates may also reimburse expenses or make payments from their own resources to intermediaries in consideration of services or other activities the Adviser believes may facilitate investments in the Funds.

The possibility of receiving, or the receipt of, the payments described above may provide intermediaries or their salespersons with an incentive to favor sales of Shares of any of the Funds, and other funds whose affiliates make similar compensation available, over other investments that do not make such payments. Investors may wish to take such payment arrangements into account when considering and evaluating any recommendations relating to the Fund and other ETFs.

Premium/Discount Information

Information regarding how often each of the Fund's Shares traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV is available, free of charge at www.fminvest.com.

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Fund on an ongoing basis, at any point a "distribution," as such term is used in the Securities Act of 1933, as amended (the "Securities Act"), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the Prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into individual Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not "underwriters" but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Funds' Shares that are part of an over-allotment within the meaning of Section 4(a)(3)(a) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares of the Funds are reminded that under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b) (2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the Funds' Prospectus is available on the SEC's electronic filing system. The prospectus delivery mechanism provided in Rule 153 of the Securities Act is only available with respect to transactions on an exchange.

Additional Information

The Funds enter into contractual arrangements with various parties, including, among others, the Funds' Adviser, who provides services to the Funds. Shareholders are not parties to, nor intended (or "third party") beneficiaries of, those contractual arrangements.

The Prospectus and the SAI provide information concerning the Funds that you should consider in determining whether to purchase Shares of any of the Funds. The Funds may make changes to this information from time to time. Neither this Prospectus nor the SAI is intended to give rise to any contract rights or other rights in any shareholder, other than any rights conferred explicitly by federal or state securities laws that may not be waived.

NO PERSON HAS BEEN AUTHORIZED TO GIVE ANY INFORMATION OR MAKE ANY REPRESENTATIONS NOT CONTAINED IN THIS PROSPECTUS OR IN THE FUND'S SAI INCORPORATED HEREIN BY REFERENCE, IN CONNECTION WITH THE OFFERING MADE BY THIS PROSPECTUS AND, IF GIVEN OR MADE, SUCH REPRESENTATIONS MUST NOT BE RELIED UPON AS HAVING BEEN AUTHORIZED BY THE COMPANY OR ITS DISTRIBUTOR. THIS PROSPECTUS DOES NOT CONSTITUTE AN OFFERING BY THE COMPANY OR BY THE DISTRIBUTOR IN ANY JURISDICTION IN WHICH SUCH OFFERING MAY NOT LAWFULLY BE MADE.

FINANCIAL HIGHLIGHTS

The table below sets forth certain financial information for the period indicated for the F/m Ultrashort Treasury Inflation-Protected Security (TIPS) ETF. Total return in the table represent the rate an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the Fund's financial statements and has been audited by Cohen & Company, Ltd., the Fund's independent registered public accounting firm. This information should be read in conjunction with the Fund's financial statements, which, together with the report of the Fund's independent registered public accounting firm, are included in the Fund's annual report, which is available upon request.

No financial information is available for the F/m Yield Curve Steepening Strategy ETF, F/m Yield Curve Flattening Strategy ETF, F/m Rising Interest Rates Strategy ETF, and F/m Falling Interest Rates Strategy ETF as such Funds had not commenced operations prior to the date of this Prospectus.

FINANCIAL HIGHLIGHTS

Contained below is per share operating performance data for shares outstanding, total investment return (loss), ratios to average net assets and other supplemental data for the period. This information has been derived from information provided in the financial statements.

	PERIOD ENDED
	<u>AUGUST 31,</u>
	<u>2025^(a)</u>
F/m Ultrashort Treasury Inflation-Protected Security (TIPS) ETF	
PER SHARE DATA:	
Net asset value, beginning of period	\$ 50.00
INVESTMENT OPERATIONS:	
Net investment income ^(b)	1.17
Net realized and unrealized gain/(loss) on investments ^(c)	(0.10)
Total from investment operations	1.07
LESS DISTRIBUTIONS FROM:	
Net investment income	(0.95)
Total distributions	(0.95)
ETF transaction fees per share	0.00 ^(d)
Net asset value, end of period	\$ 50.12
Total Return^{(e)(f)}	2.16%
SUPPLEMENTAL DATA AND RATIOS:	
Net assets, end of period (in thousands)	\$ 65,655
Ratio of expenses to average net assets ^(g)	0.25%
Ratio of net investment income/(loss) to average net assets ^(g)	4.57%
Portfolio turnover rate ^{(e)(h)}	66%

(a) Inception date of the Fund was February 24, 2025

(b) Net Investment income per share has been calculated based on average shares outstanding during the period.

(c) Realized and unrealized gains and losses per share in the caption are balancing amounts necessary to reconcile the change in net asset value per share for the periods, and may not reconcile with the aggregate gains and losses in the Statement of Operations due to share transactions for the periods.

(d) Amount represents less than \$0.005 per share.

(e) Not annualized for periods less than one year.

(f) Total investment return/(loss) on net asset value is calculated assuming a purchase of shares on the first day and a sale of shares on the last day of each period reported and includes reinvestments of dividends and distributions, if any.

(g) Annualized for periods less than one year.

(h) Portfolio turnover rate excludes in-kind transactions.

FOR MORE INFORMATION

For more information about the Funds, the following documents are available free upon request:

Annual/Semiannual Reports

Once available, additional information about the Fund's investments will be included in the Fund's annual and semi-annual reports to shareholders. The annual report will contain a discussion of the market conditions and investment strategies that significantly affected each Fund's performance during its most recently completed fiscal year. For all of the other Funds listed in this Prospectus, the annual reports and semi-annual reports to shareholders will be available at www.fminvest.com or by calling 1-800-617-0004.

Statement of Additional Information

The SAI dated December 31, 2025, provides more details about each Fund and its policies. The current SAI is on file with the SEC and is incorporated by reference into (and is legally a part of) this Prospectus.

TO OBTAIN INFORMATION

The SAI is available, without charge, upon request along with the semiannual and annual reports. To obtain a free copy of the SAI, semiannual or annual reports or if you have questions about the Funds:

By Internet

For all Funds listed in this Prospectus, go to www.fminvest.com.

By Telephone

For all Funds listed in this Prospectus, call 1-800-617-0004 or your securities dealer.

From the SEC

Information about the Funds (including the SAI) and other information about the Funds are available on the EDGAR Database on the SEC's Internet site at www.sec.gov, and copies of this information may be obtained, after paying a duplicating fee, by sending an electronic request to publicinfo@sec.gov.
